The High Frontier Gerard K. O'Neill, 1989      *The High Frontier* Gerard K. O'Neill, 2000      Provisional Cities Renata Tyszczyk, 2017-11-02 This book considers the provisional nature of cities in relation to the Anthropocene the proposed geological epoch of human induced changes to the Earth system It charts an environmental history of curfews admonitions and alarms about dwelling on Earth Provisional cities are explored as exemplary sites for thinking about living in this unsettled time Each chapter focuses on cities settlements or proxy urbanisations including past disaster zones remote outposts in the present and future urban fossils The book explores the dynamic changing and contradictory relationship between architecture and the global environmental crisis and looks at how to re position architectural and urban practice in relation to wider intellectual environmental political and cultural shifts The book argues that these rounder and richer accounts can better equip humanity to think through questions of vulnerability responsibility and opportunity that are presented by immense processes of planetary change These are cautionary tales for the Anthropocene Central to this project is the proposition that living with uncertainty requires that architecture is reframed as a provisional practice This book would be beneficial to students and academics working in architecture geography planning and environmental humanities as well as professionals working to shape the future of cities

Space, the High Frontier in Perspective Daniel Deudney, 1982 This paper examines how the exploration of space has affected life on earth Examined are milestones in space war or peace in space learning about earth from space the satellite communications revolution space industrialization and the ownership of space The real beginning of the Space Age was the October 1957 Soviet launch of a 184 pound satellite into orbit The United States put an object into orbit in January 1958 The Soviet Union has taken an important lead in internationalizing access to space by sending Cuban East European French and Mongolian cosmonauts into space The current projects of the U S and Soviet programs the space shuttle and the space station are perfect complements The superpowers have begun a race for the first time to place weapons of destruction in orbit Space militarization is being aggressively promoted by both countries The most valuable contribution space activities have made is the information they have provided about the universe and about the earth For example scientists are learning how the atmosphere oceans sunlight and life forms interact to make the planet habitable and how human actions are altering those systems The biggest scientific advances have been in astronomy and related sciences As a result of the satellite communications revolution satellite TV broadcasts are bringing cultural interactions that for the first time begin to match the scale of the world s economical and political interdependencies Disputes regarding the ownership of space are beginning to emerge RM

McCurdy,1997-10-17 Examining popular images that have helped motivate the most ambitious civil space program in the world McCurdy argues that the spacefaring dream tapped into several of America s most deeply rooted cultural ideals He

also explains how space advocates playing on the public's Cold War fears convinced politicians that control of space meant control of the earth. He also contends that the gaps between expectations and reality led to public policy obligated to entertain as well as inform. 43 photos Counterculture Green Andrew G. Kirk, 2007. For many it was more than a publication; it was a way of life. The Whole Earth Catalog billed itself as Access to Tools and it grew from a Bay Area blip to a national phenomenon catering to hippies, do-it-yourselfers, and anyone interested in self-sufficiency independent of mainstream America now known as living off the grid. In recovering the history of the Catalog's unique brand of environmentalism, historian Kirk recounts how Stewart Brand and the Point Foundation promoted a philosophy of pragmatic environmentalism that celebrated technological achievement, human ingenuity, and sustainable living. Kirk shows us that Whole Earth was more than a mere counterculture fad. At a time when many of these ideas were seen as heretical to a predominantly wilderness-based movement, it became a critical forum for environmental alternatives and a model for how complicated ecological ideas could be presented in a hopeful and even humorous way. From publisher description **Living and Working in Space** Philip Robert Harris, 1992. This book examines the behavioural science aspects of living and working in space. Dr. Harris examines the twin concepts of space ethos and synergy, underlining their vital importance in any extraterrestrial expansion. He analyzes the broader human dimensions of space exploration and development beyond the scientific and engineering considerations. He examines the emergence of a unique space culture in the orbital environment, taking into consideration the anthropological, sociological, psychological, and living systems aspects, and also reviews the impact of organizational culture on space agencies and the aerospace industry together with the influence of space technology and habitation upon the Earth's culture and peoples. *The Space Shuttle* David M. Harland, 1998-07-14. Presents the Space Shuttle as a utilitarian craft focusing on its origins, operations, and importance to many scientific missions. **The Space Station Decision** Howard E. McCurdy, 1990-08. Selected by Choice Magazine as an Outstanding Academic Title. Outstanding Academic Title 1991. Choice Magazine. Although building a space station has been an extraordinary challenge for America's scientists and engineers, the securing and sustaining of presidential approval, congressional support, and long-term funding for the project was an enormous task for bureaucrats. *The Space Station Decision* examines the history of this controversial initiative and illustrates how bureaucracy shapes public policy. Using primary documents and interviews, Howard E. McCurdy describes the events that led up to the 1984 decision to build a permanently occupied international space station in low Earth orbit. As he follows the trail of the space station proposal through the labyrinth of White House policy review, McCurdy explains the evolution of the presidential budget review process, the breakup of the cabinet system, the proliferation of subcabinets, and Executive Office interagency involvement of White House staff in framing issues for presidential review, and the role of bureaucracy in advancing administration legislation on Capitol Hill. Comparing the space station decision to earlier decisions to go to the moon and to build the space shuttle, McCurdy shows how public officials

responsible for long term science and technology policy maneuvered in a political system that demanded short term flexibility
