Topics In Ocean Eng Volume 1:

Topics in Ocean Engineering, 1971 Ocean Engineering Mechanics Michael E. McCormick, 2010 This book is based on the author's experiences in engineering practice and in the classroom The introductory topics in wave mechanics and the presentation of such have their foundations in the courses taught at the U S Naval Academy The advanced topics have their origins in the postgraduate courses taught at the Johns Hopkins University Topics in Ocean Engineering Charles L. Bretschneider, 1970 **Advances In Coastal And Ocean Engineering, Vol 1** Philip L-f Liu, Harry H Yeh, Mustafa A Foda, Robert G Dean, Jentsje Van Der Meer, 1995-02-20 The aim of this review series is to present critical commentaries on knowledge in the field of coastal and ocean engineering Each article will review and illuminate the development of the scientific understanding of a specific engineering topic Critical reviews on engineering designs and practices in different countries will also be included The first volume of the review series is a collection of five papers reviewing a wide range of research topics in coastal engineering The first paper written by Yeh discusses one of the fundamental issues concerning many fluid flow problems namely free surface boundary conditions In the second paper a survey on another boundary dynamics the seafloor dynamics is presented Foda reviews recent studies on the nonlinear wave energy transfer into the seabed and different modes of wave induced sediment fluidization processes in cohesive as well as in noncohesive seabeds Several issues concerning the interactions between sediment deposit and marine structures such as pipeline and breakwater are also briefly reviewed One of the active research areas in modeling wave propagation is the construction of a unified model which is valid from deep water to shallow water Liu discusses several existing models The sediment movement in the surf zone is a complex system It can usually be decomposed into the longshore and the cross shore components Dean focused his discussion on the cross shore sediment transport process In the last paper van der Meer presents a comprehensive review of the design consideration for a rubble mound breakwater Both hydraulic and structural responses are discussed Design formulas and graphs are presented which can be used for a conceptual design of rubble mound breakwater Topics in ocean engineering. Vol.1+2 Charles Bretschneider, 1969 *Contemporary Ideas on Ship Stability* Vadim L. Belenky, Kostas J. Spyrou, Frans van Walree, Marcelo Almeida Santos Neves, Naoya Umeda, 2019-01-01 This book contains a selection of research papers presented at the 11th and 12th International Ship Stability Workshops Wageningen 2010 and Washington DC 2011 and the 11th International Conference on Stability of Ships and Ocean Vehicles Athens 2012 The book is directed toward the ship stability community and presents innovative ideas concerning the understanding of the physical nature of stability failures and methodologies for assessing ship stability Particular interest of the readership is expected in relation with appearance of new and unconventional types of ships assessment of stability of these ships cannot rely on the existing experience and has to be based on the first principles As the complexity of the physical processes responsible for stability failure have increasingly made time domain numerical simulation the main tool for stability assessment particular

emphasis is made on the development and application of such tools. The included papers have been selected by the editorial committee and have gone through an additional review process with at least two reviewers allocated for each. Many of the papers have been significantly updated or expanded from their original version in order to best reflect the state of knowledge concerning stability at the time of the book's publication. The book consists of four parts: Mathematical Model of Ship Motions in Waves, Dynamics of Large Motions, Experimental Research and Requirements, Regulations and Operations.

Advances In Coastal And Ocean Engineering, Vol 4 Philip L-f Liu, Norden E Huang, Costas Synolakis, Pablo Blondeaux, Giovanna Vittori, B Mutlu Sumer, Jorgen Fredsoe, 1999-06-17. This volume consists of five excellent review papers. In the first paper, "A Review of Coastal Wave Modeling: The Physical and Mathematical Problems," N E Huang presents a summary of the state of the art of wave modeling in deep waters. He points out several shortcomings in existing modeling approaches and expresses the urgent need for developing a statistical theory of surface waves in shallow waters. Huang believes that the statistical theory can be formulated as the soliton turbulence. He also points out other important issues in wave modeling including the air-sea interaction processes and the physics of the wave-current and dissipation processes. In the second paper, "A C Radder focuses his discussion on the Hamiltonian Dynamics of Water Waves. He demonstrates that the Hamiltonian theory of surface waves can be formulated in terms of surface elevation and the velocity potential at the free surface as canonical variables. Several evolution equations can be readily obtained. Radder also points out the need to develop a stochastic wave model in the shallow water environment. The maximum runup is arguably the single most important parameter in the design of coastal structures and for the evaluation of the inundation potential of storm surges and tsunamis. C E Synolakis presents a thorough review of the Exact Solutions of Shallow Water Wave Equations. For a single sloping beach, the evolution and runup of solitary dipole and cnoidal waves are discussed. These solutions are then extended to more practical problems. The last two papers concern the flow and sediment motions near the seafloor. In their paper "Boundary Layer and Sediment Dynamics Under Sea Waves," P Blondeaux and G Vittori give an expert review of the recent contributions on the understanding of the interaction of the coherent vortex with cohesionless or partially cohesive sediments in a boundary layer. The formation and development of small-scale bedforms in the coastal regions are also discussed. Finally, in "Wave Scour Around Structures," B M Sumer and J Fredsoe review the scouring processes around various types of structures. Many recent experimental data and theoretical developments are presented.
