

THEORY OF TORSION AND TORSION EQUATION

- Consider a shaft fixed at one end subjected to torque at the other end.

Let T = Torque

l = length of the shaft

R = Radius of the shaft

- As a result of torque every cross-section of the shaft will be subjected to shear stress.
- Line CA on the surface of the shaft will be deformed to CA' and OA to OA' , as shown in figure.
- Let, $\angle ACA'$ = shear strain
- $\angle AOA'$ = angle of twist

Topics In Torsion Theory:

Topics in Torsion Theory Paul E. Bland, 1998-11-30 Torsion theory provides an umbrella under which many classical properties of rings and modules can be reformulated. The purpose of this book is to provide the reader with a quick introduction to torsion theory and to study selected properties of rings and modules in this setting. The material presented ranges from a torsion theoretical treatment of standard topics in ring and module theory to how previously untreated properties of rings and modules might be dealt with in this setting. The approach has been to develop the material so that classical results can be recovered by selecting an appropriate torsion theory. Simple modules, maximal submodules, the Jacobson radical, and modules with chain conditions are investigated relative to a torsion theory. A relative form of Nakayama's lemma is given and a generalized Hopkins-Levitzki theorem is established. Injective and projective concepts are studied and a generalized Baer's condition for injective modules and a generalized Fuchs condition for quasi-injective modules are shown to hold. Flat modules and covers and hulls of modules are investigated and the concept of a relative quasi-projective cover is used to characterize those rings which are right perfect modulo their torsion ideal. Torsion-free covers are also studied and results are given which generalize well-known results on torsion-free covers for modules with usual torsion over an integral domain. Finally, semi-primitive, semi-simple, and semi-prime rings are investigated in a torsion-theoretical setting and rings which are right primitive relative to a torsion theory are linked to a form of density which is reminiscent of Jacobson density for right primitive rings.

Methods of Graded Rings Constantin Nastasescu, Freddy van Oystaeyen, 2004-02-07 The topic of this book, graded algebra, has developed in the past decade to a vast subject with new applications in noncommutative geometry and physics. Classical aspects relating to group actions and gradings have been complemented by new insights stemming from Hopf algebra theory. Old and new methods are presented in full detail and in a self-contained way. Graduate students as well as researchers in algebra geometry will find in this book a useful toolbox. Exercises with hints for solution provide a direct link to recent research publications. The book is suitable for courses on Master level or textbook for seminars.
