Topological Algebras:

Topological Algebras A. Mallios, 2011-08-18 This volume is addressed to those who wish to apply the methods and results of the theory of topological algebras to a variety of disciplines even though confronted by particular or less general forms It may also be of interest to those who wish from an entirely theoretical point of view to see how far one can go beyond the classical framework of Banach algebras while still retaining substantial results The need for such an extension of the standard theory of normed algebras has been apparent since the early days of the theory of topological algebras most notably the locally convex ones It is worth noticing that the previous demand was due not only to theoretical reasons but also to potential concrete applications of the new discipline

Locally Multiplicatively-Convex Topological Algebras Ernest A. Michael, 1952

Topological Algebras with Involution M. Fragoulopoulou, 2005-07-26 This book familiarizes both popular and fundamental notions and techniques from the theory of non normed topological algebras with involution demonstrating with examples and basic results the necessity of this perspective The main body of the book is focussed on the Hilbert space bounded representation theory of topological algebras and their topological tensor products since in our physical world apart from the majority of the existing unbounded operators we often meet operators that are forced to be bounded like in the case of symmetric algebras So one gets an account of how things behave when the mathematical structures are far from being algebras endowed with a complete or non complete algebra norm In problems related with mathematical physics such instances are indeed quite common Key features Lucid presentation Smooth in reading Informative Illustrated by examples Familiarizes the reader with the non normed world Encourages the hesitant Welcomes new comers Well written and lucid presentation Informative and illustrated by examples Familiarizes the reader with the non normed world

Topological Algebras V.K. Balachandran, 2000-11-23 This book consists of nine chapters Chapter 1 is devoted to algebraic preliminaries Chapter 2 deals with some of the basic definition and results concerning topological groups topological linear spaces and topological algebras Chapter 3 considered some generalizations of the norm Chapter 4 is concerned with a generalization of the notion of convexity called p convexity In Chapter 5 some differential and integral analysis involving vector valued functions is developed Chapter 6 is concerned with spectral analysis and applications The Gelfand representation theory is the subject matter of Chapter 7 Chapter 8 deals with commutative topological algebras Finally in Chapter 9 an exposition of the norm uniqueness theorems of Gelfand and Johnson extended to p Banach algebras is given

Topological Algebras and Their Applications Hugo Arizmendi, Lourdes Palacios, 2004 The Fourth International Conference on Topological Algebras and Their Applications was held in Oaxaca Mexico This meeting brought together international specialists and Mexican specialists in topological algebras locally convex and Banach spaces spectral theory and operator theory and related topics This volume contains talks presented at the conference as well as articles received in response to a call for papers some are expository and provide new insights while others contain new research The book is suitable for graduate students and research mathematicians working in topological vector spaces topological algebras and their applications

Topological Algebras, 2011-10-10 This book discusses general topological algebras space $C(T, F)$ of continuous functions mapping T into F as an algebra only with pointwise operations and $C(T, F)$ endowed with compact open topology as a topological algebra $C(T, F)_c$ It characterizes the maximal ideals and homomorphisms closed maximal ideals and continuous homomorphisms of topological algebras in general and $C(T, F)_c$ in particular A considerable inroad is made into the properties of $C(T, F)_c$ as a topological vector space Many of the results about $C(T, F)_c$ serve to illustrate and motivate results about general topological algebras Attention is restricted to the algebra $C(T, \mathbb{R})$ of real valued continuous functions and to the pursuit of the maximal ideals and real valued homomorphisms of such algebras The chapter presents the correlation of algebraic properties of $C(T, F)$ with purely topological properties of T The Stone Ceĉh compactification and the Wallman compactification play an important role in characterizing the maximal ideals of certain topological algebras

two ways It contains all necessary elementary results from the theory of topological groups and rings In order to read these parts of the book the reader needs to know only elementary facts from the theories of groups rings modules topology The book consists of two parts
