## Unusual Algebra:

An unusual algebra, 1978      An Unusual Algebra Isaak Moisevič Âglom, 1984      **Philosophical Logic in Poland** Jan Wolenski, 2013-03-14 Poland has played an enormous role in the development of mathematical logic. Leading Polish logicians like Lesniewski, Łukasiewicz, and Tarski produced several works related to philosophical logic, a field covering different topics relevant to philosophical foundations of logic itself as well as various individual sciences. This collection presents contemporary Polish work in philosophical logic which in many respects continues the Polish way of doing philosophical logic. This book will be of interest to logicians, mathematicians, philosophers, and linguists.      *From Representation Theory to Mathematical Physics and Back* Mikhail Khovanov, Joshua Sussan, Anton Zeitlin, 2025-05-14 This volume is a proceedings of a workshop at the Simons Center for Geometry and Physics from May 31 to June 4, 2022. The workshop highlighted progress in the areas of vertex operator algebras, conformal field theory, categorification, low-dimensional topology, and representation theory of affine Lie algebras, loop groups, and quantum groups. In the past 40 years, string theory gave rise to the mathematical theory of vertex operator algebras, which led to the construction of representations of affine Lie algebras and the Moonshine module of the Monster group. These mathematical constructions have in turn led to ideas about 3-dimensional quantum gravity. In another direction, the discovery of the Jones polynomial led to a physical construction of 3-dimensional topological quantum field theories (TQFTs) which in turn advanced many mathematical developments in quantum groups and low-dimensional topology. Louis Crane and Igor Frenkel introduced the categorification program with the goal of upgrading 3-dimensional TQFTs coming from representation theory of quantum groups to 4-dimensional TQFTs. This idea gave rise to the development of link homologies constructed from representation-theoretic, algebraic, geometric, combinatorial, and physical structures. Articles in this volume present both classical and new results related to these topics. They will be interesting to researchers and graduate students working in mathematical aspects of modern quantum field theory.      **Algebra 4** Ramji Lal, 2021-03-29 This book, the fourth in the four-volume series in algebra, discusses Lie algebras and representation theory in detail. It covers topics such as semisimple Lie algebras, root systems, representation theory of Lie algebras, Chevalley groups, and representation theory of Chevalley groups. Numerous motivating illustrations have been presented along with exercises enabling readers to acquire a good understanding of topics which they can then use to find the exact or most realistic solutions to their problems.      **Algebraic and Algorithmic Aspects of Differential and Integral Operators** Moulay Barkatou, Thomas Cluzeau, Georg Regensburger, Markus Rosenkranz, 2014-02-25 This book constitutes the proceedings of the 5th International Meeting on Algebraic and Algorithmic Aspects of Differential and Integral Operators (AADIOS 2012) held at the Applications of Computer Algebra Conference in Sofia, Bulgaria, on June 25-28, 2012. The total of 9 papers presented in this volume consists of 2 invited papers and 7 regular papers which were carefully reviewed and selected from 13 submissions. The topics of interest are symbolic computation for operator algebras, factorization of differential
