Campbell, Elizabeth A Corley, 2015-02-12 This timely book provides a wealth of useful information for following through on today's renewed concern for sustainability and environmentalism. It's designed to help city managers, policy analysts, and government administrators think comprehensively and communicate effectively about environmental policy issues. The authors illustrate a system-based framework model of the city that provides a holistic view of environmental media: land, air, and water, while helping decision makers to understand the extent to which environmental policy decisions are intertwined with the natural, built, and social systems of the city. They go on to introduce basic and environment-specific policy analytic models, methods, and tools, presents numerous specific environmental policy puzzles that will confront cities, and introduces methods for understanding and educating public opinions around urban environmental policy. The book is grounded in the policy analytic perspective rather than political science, economic, or planning frameworks. It includes both new scholarship and synthesis of existing policy analysis. Numerous tables, figures, checklists, and maps, as well as a comprehensive reference list, are included.      *The Quality of the Urban Environment* Harvey S. Perloff, 2015-06-03 The quality of the environment in which people live, work, and play influences to no small degree the quality of life itself. The environment can be satisfying and attractive and provide scope for individual development, or it can be poisonous, irritating, and stunting. The papers in this volume, first published in 1969, are concerned with the urban environment in which the majority of Americans live, or more accurately, with the environment of urbanites, for the concern extends to outlying areas where urban dwellers visit and play. The chapters aim to provide a better understanding of the natural resource elements in the urban environment and will be of interest to students of environmental studies and human geography.      **Rapid Urban Environmental Assessment: Methodology and preliminary findings** Josef Leitmann, 1994 Urban Management Program Series Paper 14 A recent evaluation of urban research in developing countries noted that scant data are available on the urban environment as little research has been done on the topic. This first volume in a two-volume set describes the development of a three-step evaluation process whereby data are collected and analyzed to support the involvement of stakeholders, suggests future directions and improvements, and summarizes results from use of the approach in selected cities. The second of a two-volume set, see below, contains tools that practitioners and researchers can apply directly in the field. Towards a Sustainable Urban Environment Instituto Brasileiro de Administração Municipal, World Bank, 1993 The aims of this discussion paper are to improve understanding of the issue of sustainable development in the context of the urban environment in Rio, to disseminate the results of the rapid diagnostic explored in the case study to help researchers of urban environmental issues in Brazil consolidate their work to improve the mechanisms for transferring the findings from research into urban environmental management, and to define better ways of disseminating research results. The volume discusses the vulnerability of Rio de Janeiro to environmental degradation and explores several historical antecedents. The papers which have been contributed to this volume have been grouped around seven main topics: conceptual issues, institutional issues, financial issues, operational experience, and technological issues, and training, and the view from the nongovernmental organizations. The book provides a background to the physical characteristics of the city and examines the historical framework for the centralized urban development pattern, both in the country and in the State of Rio de Janeiro. It explores the conceptual framework within which to analyze the case of Rio and the institutional framework of environmental policy in Brazil and the financing of public expenditures on the environment.
