Evaluating Urban and Regional Plans Mark Seasons, 2021-03-01 Effective practitioners in any field understand that lessons from the past underlie successes in the future Which practices

have worked before and which haven't. What went wrong and what does that teach us? Too often, however, urban and regional planners simply don't know whether or how well planning policies were carried out.

Evaluating Urban and Regional Plans blends theory and practice to delineate the questions that planners need to ask as they shape the future of Canadian communities. Mark Seasons offers a wealth of pragmatic guidance on comprehensive plan evaluation processes and methods. Monitoring the outputs and outcomes generated by a plan and gauging their impact ensures that the planning function remains relevant and that resources are used effectively, efficiently, and equitably. As both a primer on plan evaluation practice and an original contribution to theory, *Evaluating Urban and Regional Plans* is an invaluable resource not only for the Canadian planning community but for planners everywhere.

Basic Methods of Policy Analysis and Planning Carl V. Patton, David S. Sawicki, 1986. The book focuses on basic, quickly applied policy analysis methods that can be used to resolve policy problems. There are relevant real-life examples used throughout.

Contemporary Planning Practice Gavin Parker, Emma Street, 2021-04-22. Planning today is an increasingly complex system of specialisms, and this brand new introduction is the first textbook to offer both a broad overview of each core area in planning alongside the skills necessary to combine each specialism in order to make sustainable and efficient planning decisions. In so doing, it gives students a unique glimpse into the realities of working in planning today. Planners need knowledge that goes beyond the history of planning decisions in order to reconcile competing demands from corporate speculative property developers to environmental activists. This new role, aggregating specialisms, is at the forefront of this innovative approach, equipping students with the tools necessary to do planning which today means being both expert and generalist, specialist and synthesiser. Planners must now act as professional mediators of different, often conflicting or incompatible interests. Planners are themselves working as specialists, whether that is in heritage, transport, ecology, economic assessment, or design. And this dual role reflects the organisation of this new text, introduced with a wealth of practitioner-informed chapters to enliven and inspire passion for the crucial role of planning. This text is an ideal companion for all practitioners and students of planning and related disciplines at undergraduate and master's level.

Planning Sustainable Cities UN-Habitat, 2016-05-13. Current urban planning systems are not equipped to deal with the major urban challenges of the twenty-first century, including effects of climate change, resource depletion, and economic instability, plus continued rapid urbanization with its negative consequences such as poverty, slums, and urban informality. These planning systems have also, to a large extent, failed to meaningfully involve and accommodate the ways of life of communities and other stakeholders in the planning of urban areas, thus contributing to the problems of spatial marginalization and exclusion. It is clear that urban planning needs to be reconsidered and revitalized for a sustainable urban future. *Planning Sustainable Cities* reviews the major challenges currently facing cities and towns all over the world, the emergence and spread of modern urban planning, and the effectiveness of current approaches. More importantly, it identifies innovative urban planning approaches and practices that are more responsive to current and future
