bottom fisheries in the high seas in 2016 Food and Agriculture Organization of the United Nations, 2020-02-28 The Worldwide review of bottom fisheries in the high seas in 2016 is an update to the first Worldwide review of bottom fisheries in the high seas published in 2009 based on information from 2003 to 2006 It provides states and other interested parties with a summary of the current status of high seas bottom fisheries worldwide The present updated review begins with a description of the demersal finfish and shellfish resources before offering a global perspective on fisheries and management it then provides specific regional information over eleven chapters covering the high seas of the world's oceans by region Drawing on data up to and including 2016 it provides a survey of the current state of bottom fisheries since the original Worldwide review considering these fisheries in the context of their historical evolution Target: Earth Allan O. Kelly, Frank Dache, 1953 *Polish Polar Research*, 1985 **Marine Ecosystem Assessment for the Southern Ocean: Meeting the Challenge for Conserving Earth Ecosystems in the Long Term** Monica M. C. Muelbert, 2024-12-24 National and international agencies need assessments of change in ecosystems and their drivers in order to sustain natural systems to maintain the delivery of services and to meet the challenge for conserving Earth ecosystems in the long term In marine systems change may arise directly from human activities e.g. fisheries indirectly from local or global activities cascading effects through food webs from fisheries or changing environments from climate change and or ocean acidification or from naturally varying processes A particular challenge for managers is to identify how dangerous future climate change will be for ecosystems and their services and whether mitigation or adaptation may be needed in advance in order to achieve the conservation requirements For regions of international attention particularly those that have the attention of many management or policy oriented bodies a standardized process is needed to harmonize the scientific information on the status and trends in ecosystems used by the different bodies That process also needs to ensure the information is available in a timely manner For example assessments of change in habitats species and or food webs in the Southern Ocean are currently compiled separately for at least ten different international organizations or processes A Marine Ecosystem Assessment for the Southern Ocean MEASO aims to harmonize that information for policy makers This assessment began with an international conference in April 2018 <http://www.measo2018.aq> where it was agreed to undertake the first MEASO over 2018-2019 with the view to provide the outcomes to relevant bodies such as the Scientific Committee for the Conservation of Antarctic Marine Living Resources soon after Proceedings of the Workshop on Antarctic Earth Sciences 2002 Giuliano Brancolini, Claudio Ghezzi, A.
