Carbon Footprint Best:

The Palgrave Handbook of Practical Sustainability Robert Brinkmann, Chit Wityi Oo, 2025-05-09 This book provides a comprehensive look at practical sustainability around the world. The book takes a distinctly regional case study perspective and highlights different approaches to managing sustainability challenges. Chapters by authors from all corners of the world look at a range of sustainability issues including environmental sustainability, environmental equity and justice, and government and business approaches to sustainability. The authorship of the book is distinctly global, which provides an important perspective to this volume. Each chapter focuses on a different sustainability problem and how it was addressed in the region. Readers will take away a tremendous amount of information as to how sustainability challenges are addressed by leaders throughout the globe.

Profit Maximization Techniques for Operating Chemical Plants Sandip K.

Lahiri, 2020-04-30 A systematic approach to profit optimization utilizing strategic solutions and methodologies for the chemical process industry. In the ongoing battle to reduce the cost of production and increase profit margin within the chemical process industry, leaders are searching for new ways to deploy profit optimization strategies. *Profit Maximization Techniques For Operating Chemical Plants* defines strategic planning and implementation techniques for managers, senior executives, and technical service consultants to help increase profit margins. The book provides in-depth insight and practical tools to help readers find new and unique opportunities to implement profit optimization strategies. From identifying where the large profit improvement projects are to increasing plant capacity and pushing plant operations towards multiple constraints while maintaining continuous improvements, there is a plethora of information to help keep plant operations on budget. The book also includes information on take-away methods and techniques for identifying and exploiting potential areas to improve profit within the plant. Focus on latest Artificial Intelligence based modeling, knowledge discovery, and optimization strategies to maximize profit in running plant. Describes procedure to develop advanced process monitoring and fault diagnosis in running plant. Thoughts on engineering design best practices and monitoring to sustain profit improvements. Step-by-step guides to identifying building and deploying improvement applications. For leaders and technologists in the industry who want to maximize profit margins, this text provides basic concepts, guidelines, and step-by-step guides specifically for the chemical plant sector.

New Trends in Energy-Economy-Environment System Jun

Wu, Wen Zhang, Xiaofeng Xu, Tatsushi Nishi, Ernesto D. R. Santibanez Gonzalez, 2026-03-12 The nexus of Energy, Economy, and Environment (3E) systems is of great importance in the global development scenario. In the past decades, the problems related to 3E have been studied and evaluated by numerous researchers and practitioners. The endorsements of the world of the 2030 Agenda for Sustainable Development Goals proposed by the United Nations Development Organization indicated that the triple helix is more present today than ever before. Ensuring affordable and clean energy is the seventh goal of the 2030 Agenda for Sustainable Development, in which environmental metrics such as carbon dioxide emissions and use of

water resources are important drivers The evolution of the objectives in the SDGs during past decades promotes global members to adopt a holistic and integrated vision while figuring out how to improve and stabilize the economic situation under the restrictions of the natural environment and exhaustible resources This research topic aims to investigate the interrelations between the Economy Energy and Environment 3E from the perspective of sustainable development in an ever changing world and introduce new research methods and perspectives into this area Both frontier and traditional 3E research submissions are welcome We are hoping to read new research in the field of 3E for example research that could address the energy transition issue in the area of sustainable development Research on this topic could help the world understand 3E better the conclusion could be adopted for decision makers at any level on their way to local national or regional sustainable development goals The Topic Editors invite scientists and investigators to contribute original research and review articles on areas which are listed below but are not limited to Environmental pollution control under complex algorithm models Energy storage transportation and risk assessment Mechanism issues centered on policy and management The interrelations between energy use environmental quality and economic development Environmental issues and sustainable development Energy conservation and emission reduction energy efficiency Sustainable energy supply chain Renewable energy Circular economy and cleaner production
