Changing Geographies of Fashion in the European Semi-Periphery

Monika Murzyn-Kupisz, 2026-01-01 Sustainability in fashion production and consumption is considered a major contemporary challenge and at the same time a visible trend in the fashion market Despite a growing body of academic literature on the topic detailed analyses have so far mainly pertained to only a selected dimension of the fashion market design production retail or consumption They have more often explored major fashion centres brands and firms rather than independent designers SMEs or independent fashion events and other alternative consumption means and spaces or less obvious intermediaries in the fashion market Although the issue of sustainable fashion has been noticed in the academic discourse in Poland it is yet to be examined bringing together the production and consumption side of the issue Nor has the spatial dimension of fashion market transformation in Poland been analysed in detail Taking a geographic perspective this book fills this research gap by presenting a holistic approach to the fashion market including design production and consumption of fashion considering the social cultural and spatial dimensions of the matter and diverse stakeholders who participate in it Providing a comprehensive analysis of long term changes in the Polish fashion market the book addresses several interesting issues These include the extent to which the sustainable reorientation of the fashion market accompanies the broader processes of adaptation restructuring and upgrading of the textile and clothing sector how it fits into the broader logic of culturalisation of clothing production and commercialisation of design as an applied artistic genre and a part of the creative sector and to what extent it is connected with new alternative consumption patterns with respect to channels places and spaces of clothing purchases and re use The main premise of the book is that although it is still a relatively small part of the fashion market in Poland sustainable fashion design production and consumption is an increasingly important phenomenon with significant social economic and spatial implications The book therefore argues that sustainable design and production constitute a promising opportunity for adaptation restructuring and upgrading of the textile and clothing sector in the

European semi periphery Using the metaphor of the fashion ecosystem it also illustrates how sustainable fashion practices contribute to the creation of new links and networks within the fashion industry alongside a more fragmented domestic production structure Chapter 1 and 9 are licensed under the terms of the Creative Commons Attribution 4.0 International License a href <http://creativecommons.org/licenses/by/4.0/> http://creativecommons.org/licenses/by/4.0/ a For further details see license information in the chapters

Circular Economy and Green Transition in the Global South Anwasha Borthakur, Pardeep Singh, 2025-09-26 This book is an attempt to address circular economy and green transition potentials and implications with a particular focus on the Global South Circular economy and green transition have been central themes of environmental policymaking during the recent decades both in the Global North and the Global South However the focus and attention on the topics among the research community have been relatively recent in the emerging economies and developing countries in the Global South The term circular economy refers to an economic model that aims to minimize waste make the most of resources and promote sustainability throughout the entire lifecycle of products and materials Unlike the traditional linear economy which follows a take make dispose pattern the circular economy seeks to create a closed loop system where resources are reused and recycled The term green transition on the other hand refers to a comprehensive and systemic shift from an economy that heavily relies on fossil fuels and environmentally destructive practices to one that is sustainable eco friendly and focused on addressing global climate change implications Green transition is often considered as a critical approach to achieve a sustainable future and mitigate the adverse impacts of climate change Circular economy and the green transition are complementary approaches that when integrated can lead to a robust sustainable global economy Both concepts acknowledge the interconnectedness of environmental economic and social facets and highlight the significance of a systematized change to achieve a better future We can consider circular economy as a subset of green transition where both share the overarching goal of fostering sustainability and mitigating detrimental environmental impacts
