The Asteroid Warshc:

The Asteroid Apocalypse Rajeev Raghuram,2021-09-15 We all know what happened to the dinosaurs Unable to do anything but observe they watched as an asteroid hurled itself into Earth s atmosphere and experienced the ramifications of the asteroid s impact on the planet Factors such as mass velocity type and trajectory resulted in the extinction of seventy percent of life on Earth Millions of years later are we prepared for our battle against this same opponent The Asteroid Apocalypse is an educational nonfiction account of the asteroid threat to life on Earth Detailing the latest science and technologies The Asteroid Apocalypse guides readers through simulations and space missions that study the asteroid threat Author Rajeev Raghuram provides readers with the historical context and accessible data to create a holistic understanding of the many potential threats Near Earth Objects NEOs and Potentially Hazardous Objects PHOs pose to Earth as well as how scientists and astronomers around the world prepare to respond to these possible threats Young readers and aspiring space engineers astronomers and scientists everywhere will enjoy this introduction into the world of space rocks swirling around our planet and how we can work to ensure a fate different to that of the dinosaurs

Asteroids Martin Elvis,2021-05-01 A unique wide ranging examination of asteroid exploration and our future in space Human travel into space is an enormously expensive and unforgiving endeavor So why go In this accessible and authoritative book astrophysicist Martin Elvis argues that the answer is asteroid exploration for the strong motives of love fear and greed Elvis s personal motivation is one of scientific love asteroid investigations may teach us about the composition of the solar system and the origins of life A more compelling reason may be fear of a dinosaur killer sized asteroid hitting our planet Finally Elvis maintains we should consider greed asteroids likely hold vast riches such as large platinum deposits and mining them could provide both a new industry and a funding source for bolder space exploration Elvis explains how each motive can be satisfied and how they help one another From the origins of life to space billiards and space sports Elvis looks at how asteroids may be used in the not so distant future

The Asteroid Threat William E. Burrows,2014-06-10 Presents a realistic workable plan for defusing a potentially lethal threat from a rogue asteroid or comet The explosion of a large meteor over Chelyabinsk Siberia in February 2013 is just the latest reminder that planet Earth is vulnerable to damaging and potentially catastrophic collisions with space debris of various kinds In this informative and forward looking book veteran aerospace writer William E Burrows explains what we can do in the future to avoid far more

serious impacts from Near Earth Objects NEOs as they are called in the planetary defense community The good news is that humanity is now equipped with the advanced technology necessary to devise a long term strategy to protect the planet Burrows outlines the following key features of an effective planetary defense strategy A powerful space surveillance system capable of spotting a serious threat from space at least twenty five years in advance A space craft nudge that would throw a collision course asteroid off target long before it poses the threat of imminent impact A weapons system to be used as a last ditch method to blast an NEO should all else fail The author notes the many benefits for world stability and increasing international cooperation resulting from a united worldwide effort to protect the planet Combining realism with an optimistic can do attitude Burrows shows that humanity is capable of overcoming a potentially calamitous situation [Asteroid](#) Patricia L. Barnes-Svarney,2013-11-11 [Impact!](#) Elizabeth Rusch,2017 Asteroids come in all shapes and sizes and hit our planet in them too But what happens if a catastrophically large one approaches earth By looking on the ground at historical asteroid craters and present day falls and up into space for the big ones yet to come a wide variety of scientists are trying to figure out how to track asteroids and how to avoid devastating impacts in the future [If an Asteroid Hit Earth](#) Ray Spangenburg,Diane Moser,Kit Moser,2000 Examines the origins of asteroids their effects on hitting the Earth in the past and the present and many of the asteroids in the solar system [Asteroids](#) Clifford J. Cunningham,2021-05-19 Grounded in historical studies of asteroids from the nineteenth century Asteroids is a fully up to date view of these remarkable objects Without resorting to any technical diagrams or mathematics Clifford J Cunningham shows that asteroids are not just rocks in space but key to understanding the life and death on Earth of both animals and humans From space missions to the asteroids starring role in literature and film Cunningham precisely and entertainingly looks at the place asteroids have in our solar system and how they affect our daily lives [Asteroids](#) Curtis Peebles,2001-07-17 Asteroids suggest images of a catastrophic impact with Earth triggering infernos tidal waves famine and death but these scenarios have obscured the larger story of how asteroids have been discovered and studied During the past two centuries the quest for knowledge about asteroids has involved eminent scientists and amateur astronomers patient research and sudden intuition advanced technology and the simplest of telescopes newspaper headlines and Cold War secrets Today researchers have named and identified the mineral composition of these objects They range in size from 33 feet to 580 miles wide and most are found in a belt between the orbits of Mars and Jupiter Covering all aspects of asteroid investigation Curtis Peebles shows how ideas about the orbiting boulders have evolved He describes how such phenomena as the Moon s craters and dinosaur extinction were gradually and by some scientists grudgingly accepted as the results of asteroid impacts He tells how a band of icy asteroids rimming the solar system first proposed as a theory in the 1940s was ignored for more than forty years until renewed interest and technological breakthroughs confirmed the existence of the Kuiper Belt Peebles also chronicles the discovery of Shoemaker Levy 9 a comet with twenty two nuclei that crashed into Jupiter in 1994 releasing many times the

energy of the world's nuclear arsenal Showing how asteroid research is increasingly collaborative the book provides insights into the evolution of scientific ideas and the ebb and flow of scientific debate [Asteroids](#) Michael K. Shepard, 2015-04-16

Where do asteroids come from and what are they made of What clues do they hold about the evolution of the Solar System Scientists have catalogued hundreds of thousands of asteroids and many are thought to contain water and amino acids the building blocks of life Michael K Shepard tells the fascinating story of their discovery and what they can tell us about the history of our own planet He describes how we find and study asteroids what they look like through the eyes of powerful telescopes and spacecraft and plans for future sample return missions This timely book interweaves accessible scientific explanations with historical background and personal narrative providing an engaging read for anyone curious about asteroids and what they may mean for our future both as threats and opportunities **Journey Through the Asteroid Belt** Mark Dillard, 2014-12-15

It's the plot of many sci fi movies An asteroid is hurtling toward Earth But is this really a danger we face And what exactly are asteroids This book answers these and many more questions about the millions of asteroids in our solar system and the large orbiting belt in which most are found [How to Kill an Asteroid](#) Robin George Andrews, 2024-10-01

One of Smithsonian Magazine's Ten Best Science Books of 2024 A Science News Favorite Book of 2024 A gripping account of the city killer asteroids that could threaten Earth and the race to build a planetary defense system There are approximately 25 000 city killer asteroids in near Earth orbit and most are yet to be found Small enough to evade detection they are capable of large scale destruction and represent our greatest cosmic threat But in September 2022 against all odds NASA's Double Asteroid Redirection Test DART mission deliberately crashed a spacecraft into a carefully selected city killer altering the asteroid's orbit and proving that we stand a chance against them In [How to Kill an Asteroid](#) award winning science journalist Robin George Andrews who was at DART mission control when it happened reveals the development of the technology that made it possible from spotting elusive asteroids and comets to figuring out their geologic defenses and orchestrating a deflection campaign In a propulsive narrative that reads like a sci fi thriller Andrews tells the story of the planetary defense movement and introduces the international team of scientists and engineers now working to protect Earth **The Lonely Existence of Asteroids and Comets** Mark Andrew Weakland, 2019-05-01

On a dark night as you watch the sky with your friends a rock with a fiery tail shoots across the sky A comet Asteroids and comets hurtle through space sometimes a little too close to Earth But did you know that they are linked to life on this planet From the asteroid Ceres to Halley's comet blast into space and enter the lonely existence of asteroids and comets **Fire in the Sky** Gordon L. Dillow, 2019-06-04

This accessible and always entertaining Booklist combination of history pop science and in depth reporting offers a fascinating account of the asteroids that hit Earth long ago and those streaming toward us now as well as how prepared we are against asteroid caused catastrophe One of these days warns Gordon Dillow the Earth will be hit by a comet or asteroid of potentially catastrophic size The only question is when In the meantime we need to get much

better at finding objects hurtling our way and if they're large enough to penetrate the atmosphere without burning up figure out what to do about them We owe many of science's most important discoveries to the famed Meteor Crater a mile wide dimple on the Colorado Plateau created by an asteroid hit 50 000 years ago In his masterfully researched *Fire in the Sky* Dillow unpacks what the Crater has to tell us Prior to the early 1900s the world believed that all craters on the Earth and Moon were formed by volcanic activity Not so The revelation that Meteor Crater and others like it were formed by impacts with space objects has led to a now accepted theory about what killed off the dinosaurs and it has opened up a new field of asteroid observation that is brimming with urgency Dillow looks at great asteroid hits of the past and modern day asteroid hunters and defense planning experts including America's first Planetary Defense Officer Satellite sensors confirm that a Hiroshima scale blast occurs in the atmosphere every year and a smaller one kiloton blast every month While Dillow makes clear that the objects above can be deadly he consistently inspires awe with his descriptions of their size makeup and origins Both a riveting work of popular science and a warning to not take for granted the space objects hurtling overhead *Fire in the Sky* is ultimately a testament to our universe's celestial wonders
