ancient Greece for him the highest pinnacle of civilization Billing discusses the use of engraved gems putting cameos and
intaglios in the context of contemporary monumental sculpture and tracing the history of carving in miniature back to the

1st 15th meeting **Gems and the New Science** Michael Bycroft, 2026-03-03 The first book length history of gems in early
modern science offers a thought provoking new take on the Scientific Revolution In *Gems and the New Science* Michael
Bycroft argues that gems were connected to major developments in the new science between the sixteenth and nineteenth
centuries As he explains precious and semiprecious stones were at the center of dramatic shifts in natural knowledge in early

modern Europe They were used to investigate luminescence electricity combustion chemical composition and more They were collected by naturalists measured by mathematicians and rubbed burned and dissolved by experimental philosophers This led to the demise of the traditional way of classifying gems which grouped them by transparency color and locality and the turn to density refraction chemistry and crystallography as more reliable guides for sorting these substances The science of gems shows that material evaluation was as important as material production in the history of science It also shows the value of seeing science as the product of the interaction between different material worlds The book begins by bringing these insights to bear on five themes of the Scientific Revolution Each of the subsequent chapters deals with a major episode in early modern science from the expansion of natural history in the sixteenth century to the emergence of applied science early in the nineteenth century This important work is not only the first book length history of the science of gems but also a fresh interpretation of the Scientific Revolution and an argument for using a new form of materialism to understand the evolution of science

The Science of Gems, Jewels, Coins, and Medals Archibald Billing, 2016-11-20 Excerpt from The Science of Gems Jewels Coins and Medals Ancient and Modern Another form of seal is the very primitive one of a flattish round chalcedony pebble with sufficient ground off one edge to afford space for engraving a subject and a hole being made through the middle to receive a string as a chalcedony brought from Nineveh having a very rough attempt in intaglio of a winged horse the Phoenician symbol Sometimes the hole was enlarged enough to admit a finger This shape was sometimes modified by being made of an oblong instead of a circular pebble and the hole made near the end opposite to the intaglio these being evidently formed from chalcedony pebbles of an

oblong shape Some were made approaching a pyramidal shape but these are of a later date and present more elaborate lapidary work and we have had modern seals made of much the same form of amethyst crystal and other stones either bored near the top to receive a ring or suspended by a golden or other metallic loop and these are sufficiently ornamental About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
