

The Practice of *Perspective-Taking*

The Language Of Perspective Taking

The Language Of Perspective Taking:

The Language of Perspective Taking Marilyn M. Toomey, 2000 Designed to help students understand other people's feelings and see different points of view Perspective Taking in Language Carla Contemori, Petra Hendriks, Franziska Köder, Emar Maier, Jorrig Vogels, Sonja Zeman, 2023-05-02 *Perspective Taking*, 2001 It is often argued that the egocentric perspective is the default perspective in natural language use. However, there are many factors that influence which perspective a person takes. In this dissertation, I look at various environmental, biological, social, and linguistic cues that point toward another hypothesis for consideration than just the default perspective of egocentricism. It is probable that there is a bias toward the egocentric perspective given we are constrained to a body which provides us with many more experiences of an egocentric perspective, but we are able to take other perspectives with relative ease and frequency. These occurrences of an other-centric perspective suggest a graded spatial attraction toward competing perspectives that result in a continuous rather than a stage-based account of perspective taking and encourage a more all-inclusive theoretical framework for taking a perspective.

Perspective-taking Ability and Executive Functioning Randy J. Knebel, 2013 *Perspective Taking: building a neurocognitive framework for integrating the "social" and the "spatial"* Klaus Kessler, Sarah H Creem-Regehr, Antonia Hamilton, 2015-06-08 Background Interacting with other people involves spatial awareness of one's own body and the other's body and viewpoint. In the past, social cognition has focused largely on belief reasoning, which is abstracted away from spatial and bodily representations, while there is a strong tradition of work on spatial and object representation which does not consider social interactions. These two domains have flourished independently. A small but growing body of research examines how awareness of space and body relates to the ability to interpret and interact with others. This also builds on the growing awareness that many cognitive processes are embodied, which could be of relevance for the integration of the social and spatial domains. Online mental transformations of spatial representations have been shown to rely on simulated body movements, and various aspects of social interaction have been related to the simulation of a conspecific's behaviour within the observer's bodily repertoire. Both dimensions of embodied transformations or mappings seem to serve the purpose of establishing alignment between the observer and a target. In spatial cognition research, the target is spatially defined as a particular viewpoint or frame of reference (FOR), yet in social interaction research, another viewpoint is occupied by another's mind, which crucially requires perspective taking in the sense of considering what another person experiences from a different viewpoint. Perspective taking has been studied in different ways within developmental psychology, cognitive psychology, psycholinguistics, neuropsychology, and cognitive neuroscience over the last few decades, yet integrative approaches for channelling all information into a unified account of perspective taking and viewpoint transformations have not been presented so far. Aims This Research Topic aims to bring together the social and the spatial and to highlight findings and methods which can unify research across areas. In particular, the topic aims to advance our

current theories and set the stage for future developments of the field by clarifying and linking theoretical concepts across disciplines Scope The focus of this Research Topic is on the SPATIAL and the SOCIAL and we anticipate that all submissions will touch on both aspects and will explicitly attempt to bridge conceptual gaps Social questions could include questions of how people judge another person's viewpoint or spatial capacities or how they imagine themselves from different points of view Spatial questions could include consideration of different physical configurations of the body and the arrangement of different viewpoints including mental rotation of objects or viewpoints that have social relevance Questions could also relate to how individual differences in personality sex development culture species etc influence or determine social and spatial perspective judgements Many different methods can be used to explore perspective taking including mental chronometry behavioural tasks EEG MEG and fMRI child development neuropsychological patients virtual reality and more Bringing together results and approaches from these different domains is a key aim of this Research Topic We welcome submissions of experimental papers reviews and theory papers which cover these topics *Understanding Points of View: Perspective-Taking* Christine Honders,2019-12-15

It's impossible to know exactly what other people are thinking but if a person has perspective it can be much easier to have an idea of those thoughts This volume introduces students to the idea of perspective taking or seeing things from another person's point of view Students will learn that perspective taking can help them build better relationships with friends and family They will be better able to resolve conflicts if they're thinking about the other person's thoughts and feelings They'll develop more empathy for people who have different experiences This book shows students that through perspective taking they'll begin to better understand and accept people who are different from themselves *The Role and Relative Importance of Language in the Development of Perspective Taking Skills in Young Children* Jill Ann Clinton,1989
