In Nature We Trust: A Raw Food Manifesto for Energy, Healing & Longevity Axay Shah, 2026-03-19. IN NATURE WE TRUST. A Raw Food Manifesto for Energy, Healing, Longevity. You've been told disease is inevitable. You've been told aging means decline. You've been told there are no real solutions. What if you've been lied to? This manifesto will teach you. The real root cause of chronic disease is not what your doctor told you. Why energy, not genetics, determines your health. The exact protocol that reverses disease without medications. How to measure what actually matters. Sixteen years of documented proof that this works. Real frameworks for real obstacles in your real life. How optimal aging is built and how to build it yourself. This is not a theory. This is not inspiration. This is the framework that creates transformation. You'll discover the complete energy restoration protocol from the philosophical foundation to practical implementation and real-world applications. Whether you're facing disease, seeking vitality, wanting to age differently, or simply refusing to accept the trajectory you've been handed, this manifesto contains what you're searching for. Stop wasting time on solutions that don't work. Stop throwing money at promises that fail. Stop accepting that decline is inevitable. The answers are here. IN NATURE WE TRUST. *Sleep Research*, 1991. **Optimal Physical Activity across the Lifespan for People of All Abilities** Ronald F. Zernicke, David Arthur Hart. Humans evolved to be mobile within the boundary conditions of Earth, and many biological and physiologic systems depend on mechanical loading to maintain integrity during growth and maturation, during skeletal maturity, and during the aging process. These systems subscribe to the use-it-or-lose-it principle and thus require continual use to maintain integrity. Given that premise, considerable basic and clinical research efforts have been directed at optimizing the effectiveness and positive impact of exercise on sports performance and the well-being of those with intact systems. However, those with disabilities or compromised abilities also benefit from exercise protocols, and there exists a need to focus attention on these populations as well. Given the myriad of biological and physiological systems that benefit from exercise and mechanical loading, there is a need for all humans of varying abilities to not only maintain the integrity of their health but to attempt to optimize it, recognizing that optimizing each person's health across the stages of the life cycle may require different exercise protocols dependent on stage of life, sex, genetics, and other individualized variables. For those with physical disabilities, embracing and maintaining such exercise protocols may be challenging, but expanded research, translation of findings, and integration of the outcomes into everyday life to enhance the health and well-being of this significant population are needed going forward.
