The Fundamentals of Timing and Synchronization for

Digital Communication Networks Robert N. Lorentsen, Richard T. Maloney, AIR FORCE INST OF TECH WRIGHT-PATTERSON AFB OH., 1986 The telecommunications industry is evolving toward integrated end to end digital communications networks To keep pace with this evolution the telecommunications professional must have a current understanding of digital communications technology Fundamental to this understanding is the knowledge of timing and synchronization T S for digital communications networks This assemblage of studies is presented as a reference It reviews the fundamentals of carrier bit and character synchronization The concept of time as the basic unit for T S is developed Time scales clocks and frequency sources used in timing systems are discussed TIme and frequency distribution services are described including LORAN C and NAVSTAR Global Positioning System GPS An explanation of time division multiplexing TDM and line codes is given Network synchronization techniques are examined and classified Thesis Postal Communication Great Britain. Communications Network Timing Harris A. Stover, DEFENSE COMMUNICATIONS ENGINEERING CENTER RESTON VA., 1975 The report is intended to provide the reader with sufficient information to develop his own intuitive insight into questions related to timing of switched digital networks employing time division multiplexing It describes timing requirements inherent in such networks It describes a number of basic techniques any one of which is capable of fulfilling these requirements It presents possible objectives for a DCS timing concept provides additional background relative to timing in the DCS and discusses provisions for system interfaces which can be advantageous This technical report does not attempt to show that any one basic technique should be used to the exclusion of all others but recommends a timing approach which employs several basic concepts each where it best matches the needs of the network It is an approach which permits an orderly evolution from the present timing status to a much more capable system Although it is not an approved DCA approach it is a tentative approach which will be subjected to considerable further study along with other approaches to either verify its desirability or recommend changes Proceedings Institution of Municipal Engineers (Great Britain), 1883
