Voice Recognition:

How Does Voice Recognition Work? Matt Aniss, 1900-01-01 In the past secretaries and assistants were in charge of taking dictation from their bosses to write letters memos and other documents With the advent of speech recognition software this practice is hardly done anymore Including interesting history and development of the latest voice technology the main content will introduce readers to this fascinating software that allows jet pilots to speak to their planes smartphone users to make a hands free call and automated phone systems to give bank account information Colorful photographs will draw readers into hi tech information while opening their imaginations to future possibilities **Journal for Computer Users in Speech and Hearing** ,1991 Mobile Computing Principles Reza B'Far, 2004-11-01 Written to address technical concerns that mobile developers face regardless of the platform J2ME WAP Windows CE etc this 2005 book explores the differences between mobile and stationary applications and the architectural and software development concepts needed to build a mobile application Using UML as a tool Reza B far guides the developer through the development process showing how to document the design and implementation of the application He focuses on general concepts while using platforms as examples or as possible tools After introducing UML XML and derivative tools necessary for developing mobile software applications B far shows how to build user interfaces for mobile applications He covers location sensitivity wireless connectivity mobile agents data synchronization security and push based technologies and finally homes in on the practical issues of mobile application development including the development cycle for mobile applications testing mobile applications architectural concerns and a case study **InfoWorld** ,1982-01-11 InfoWorld is targeted to Senior IT professionals Content is segmented into Channels and Topic Centers InfoWorld also celebrates people companies and projects **Biometric Technologies and Verification Systems** John R. Vacca, 2007-03-16 Biometric Technologies and Verification Systems is organized into nine parts composed of 30 chapters including an extensive glossary of biometric terms and acronyms It discusses the current state of the art in biometric verification authentication identification and system design principles It also provides a step by step discussion of how biometrics works how biometric data in human beings can be collected and analyzed in a number of ways how biometrics are currently being used as a method of personal identification in which people are recognized by their own unique corporal or behavioral characteristics and how to create detailed menus for designing a biometric verification system Only biometrics verification authentication is based on the identification of an intrinsic part of a human being Tokens such as smart cards magnetic stripe cards and physical keys can be lost stolen or duplicated Passwords can be forgotten shared or unintentionally observed by a third party Forgotten passwords and lost smart cards are a nuisance for users and an expensive time waster for system administrators Biometric security solutions offer some unique advantages for identifying and verifying authenticating human beings over more traditional security methods This book will serve to identify the various security applications biometrics can play a highly secure and specific role in Contains elements

such as Sidebars Tips Notes and URL links Heavily illustrated with over 150 illustrations screen captures and photographs Details the various biometric technologies and how they work while providing a discussion of the economics privacy issues and challenges of implementing biometric security solutions [An Integrated Approach to Home Security and Safety Systems](#) Sonali Goyal, Neera Batra, N. K. Batra, 2021-10-14 This book provides an integrated solution for security and safety in the home covering both assistance in health monitoring and safety from strangers intruders who want to enter the home with harmful intentions It defines a system whereby recognition of a person stranger at the door is done using three modules Face Recognition Voice Recognition and Similarity Index These three modules are taken together to provide a percentage likelihood that the individual is in the known or unknown category The system can also continuously monitor the health parameters of a vulnerable person living alone at home and aid them in calling for help in an emergency The authors have analyzed a number of existing biometric techniques to provide security for an individual living alone at home These biometric techniques have been tested using MATLAB image processing and signal processing toolboxes and results have been calculated on the basis of recognition rate A major contribution in providing security is a hybrid algorithm proposed by the author named PICA which combines features of both PCA Principle Component Analysis and ICA Independent Component Analysis algorithms This hybrid approach gives better performance recognition than either system alone The second proposed hybrid algorithm for voice recognition is named as a MFRASTA algorithm by combining features of MFCC Mel Frequency Cepstral Coefficient and RASTA PLP RelATive SpecTrA Perceptual Linear Prediction algorithm After performing experiments results are collected on the basis of recognition rate The authors have also proposed a third technique named as a Similarity Index to provide trust based security for an individual This technique is text independent in which a person is recognized by pronunciation frequency tone pitch etc irrespective of the content spoken by the person By combining these three techniques a high recognition rate is provided to the person at the door and high security to the individual living independently at home In the final contribution the authors have proposed a fingertip based application for health monitoring by using the concept of sensors This application is developed using iPhone 6 s camera When a person puts their fingertip on a camera lens with the help of brightness of the skin the person s heartbeat will be monitored This is possible even with a low quality camera In case of any emergency text messages will be sent to the family members of the individual living alone by using 3G Dongle and MATLAB tool Results show that the proposed work outperforms all the existing techniques used in face recognition voice recognition and health monitoring alone **Official Gazette of the United States Patent and Trademark Office** United States.
