Chaghaghi,2014-03-12 Cascades and Fields in Perceptual Psychophysics Robert Anthony Mills Gregson,1995

Psychophysics is by definition mappings between events in the environment and levels of human sensory responses In this text the methods of nonlinear dynamics employing trajectories developed for simpler sensory modelling are extended to classes of problems which lie at the interface between sensation and perception A diversity of topics for which extensive empirical evidence exists are reformulated by writing their dynamics in terms of complex trajectories put into coupled lattices and into cascades of such lattices Fundamental relationships between core processes of psychophysics in time and space and recurrent quantitative or topological distortions of the physical world which arise in perception are given a treatment which contrasts fundamentally with traditional linear equations in use since the 19th century ANNA A Language for Annotating Ada Programs David C. Luckham,1987-07-15 This reference manual of ANNA is another volume addressed to the ADA community ANNA is a language extension of ADA to include facilities for formally specifying the intended behavior of ADA programs It is designed to meet a perceived need to augment ADA with precise machine processable annotations so that well established formal methods of specification and documentation can be applied to ADA programs The current ANNA design includes annotations of all ADA constructs except tasking Similar extensions for formal specification can be made to other Algol like languages such as Pascal PL 1 Concurrent Pascal and Modula essentially these extensions would be subsets of ANNA The design of ANNA was undertaken from the beginning with four principal considerations 1 Constructing annotations should be easy for the ADA programmer and should depend as much as possible on notation and concepts of ADA 2 ANNA should possess language features that are widely used in the specification and documentation of programs 3 ANNA should provide a framework within which the various established theories of formally specifying programs may be applied to ADA 4 Annotations should be equally well suited for different possible applications during the life cycle of a program Such applications include not only testing debugging and formal verification of a finished program but also specification of program parts during the earlier stages of requirements analysis and program design

to the Pertinent Literature / Literatur zur Angewandten Statistik Lothar Sachs, 2012-12-06 Readers of my books students and scientists often ask for special references not commonly found in introductory or intermediate books on statistics From the titles and contents of 1449 key papers and books which are listed and numbered in Section 5 I have selected keywords and subject headings and arranged them alphabetically together with the numbers of pertinent references in Section 3 Number 1153 for instance denotes my book Applied Statistics It contains a bibliographical section on pages 568 to 641 Supplementary material is displayed in this small bibliographical guide It also complements well known textbooks of Box Hunter and Hunter No 121 Dixon and Massey No 286 Snedecor and Cochran No 1238 and many recent competitors Since the methodology of statistics is expanding rapidly many methods are not considered at all or only introduced in the basic textbooks of statistics There is a need for intermediate statistical methods concerned with increasingly complicated applications of statistics to actual research situations Here the specification of terms helps to find some sources Since the references vary considerably in length and content the number of culled or extracted terms per referenced page varies even more as does also their degree of specialization however in most cases an intermediate statistical level is maintained Mathematical Methods of Specification and Synthesis of Software Systems '85 Wolfgang Bibel, Klaus P.
