Annotation: Fibre rope has undergone dramatic technological changes over the last few decades with such advances as the development of synthetic fibres and modern types of rope construction. This major handbook takes a comprehensive look at rope making materials and structures, properties and mechanics. It covers rope production focusing on laid strand braided, low twist and parallel yarn ropes and rope terminations. Rope testing is examined in depth as well as the key issues surrounding rope retirement. Case studies from a variety of environments are studied. This is an essential reference for everyone involved in the design, selection, use, inspection and testing of fibre rope. **CONTENTS**: Introduction to fibre ropes, Rope making materials, Rope structures, Properties of rope, Rope mechanics, Rope production, Terminations, Use of rope, Inspection and retirement, Testing, Consumption markets and liability, Case studies. *Written Comments on Certain Tariff and Trade Bills*, 1985 [Miscellaneous Tariff and Trade Bills](#) United States. Burkinshaw, 2016-02-08 The production of textile materials comprises a very large and complex global industry that utilises a diverse range of fibre types and creates a variety of textile products. As the great majority of such products are coloured, predominantly using aqueous dyeing processes, the coloration of textiles is a large scale global business in which complex procedures are used to apply different types of dye to the various types of textile material. The development of such dyeing processes is the result of substantial research activity undertaken over many decades into the physico-chemical aspects of dye adsorption and the establishment of dyeing theory which seeks to describe the mechanism by which dyes interact with textile fibres. *Physico-Chemical Aspects of Textile Coloration* provides a comprehensive treatment of the physical chemistry involved in the dyeing of the major types of natural, man-made and synthetic fibres with the principal types of dye. The book covers fundamental aspects of the physical and chemical structure of both fibres and dyes together with the structure and properties of water in relation to dyeing, dyeing as an area of study as well as the terminology employed in dyeing technology and science, contemporary views of intermolecular forces and the nature of the interactions that can occur between dyes and fibres at a molecular level, fundamental principles involved in dyeing theory as represented by the thermodynamics and kinetics of dye sorption, detailed accounts of the mechanism of dyeing that applies to cotton and other cellulosic fibres, polyester, polyamide, wool, polyacrylonitrile and silk fibres, non-aqueous dyeing as represented by the use of air-organic
