This guide won't just show you what to type. It's a step-by-step journey that uses game creation to teach you the deep, powerful fundamentals of Lua, the same fundamentals used by developers at the highest levels. You'll start by building your first interactive games in Roblox and LOVE 2D. Then we pull back the curtain and show you how to master the magic of object-oriented programming with metatables. Finally, you'll see how those exact same skills are used to script high-performance professional applications like the Redis database and the Neovim text editor. This isn't just a guide to game scripting. It's your complete path from beginner to confident Lua programmer.

Engagement Design Nelson Zagalo, 2020-03-17 Interactive media designers have been discussing modes to optimize interaction design beyond mere usability. With the arrival of Emotional Design followed by the success of the User Experience (UX) approaches, the discussion continued and augmented. Experience has become a complex buzzword which is more about the subject's experience than the product, and this is why it's difficult or even impossible to define it in a concise manner. We propose to move the discussion from Experience towards Engagement to emphasize the design of the relationship between artefacts, contexts, and users. Engagement asks for a more concrete type of experience with specific needs, motives, skills, and competences which can be more clearly worked into the design of artefacts. Engagement also differs from other concepts like fun, enjoyment, happiness, or well-being and is open enough to grant freedom to designers in creating their personal world views. To push this new approach, we offer in this book a full model for the design of engagement in interactive media, still believing it can be applied beyond that. The model is arranged around what we call the three engagement streams: Progression, Expression, and Relation.
