Soft Computing Approaches In Chemistry:

Soft Computing Approaches in Chemistry Hugh M. Cartwright, Les M. Sztandera, 2012-12-06 The contributions to this book cover a wide range of applications of Soft Computing to the chemical domain The early roots of Soft Computing can be traced back to Lotfi Zadeh's work on soft data analysis 1 published in 1981 Soft Computing itself became fully established about 10 years later when the Berkeley Initiative in Soft Computing SISC an industrial liaison program was put in place at the University of California Berkeley Soft Computing applications are characterized by their ability to approximate many different kinds of real world systems tolerate imprecision partial truth and uncertainty and learn from their environment Such characteristics commonly lead to a better ability to match reality than other approaches can provide generating solutions of low cost high robustness and tractability Zadeh has argued that soft computing provides a solid foundation for the conception design and application of intelligent systems employing its methodologies symbiotically rather than in isolation There exists an implicit commitment to take advantage of the fusion of the various methodologies since such a fusion can lead to combinations that may provide performance well beyond that offered by any single technique

Soft Computing in Chemical and Physical Sciences Kanchan Sarkar, Sankar Prasad Bhattacharyya, 2017-11-06 This book can be regarded as Soft computing for physicists and chemists self taught It prepares the readers with a solid background of soft computing and how to adapt soft computing techniques to problem solving in physical and chemical research Soft computing methods have been little explored by researchers in physical and chemical sciences primarily because of the absence of books that bridge the gap between the traditional computing paradigm pursued by researchers in science and the new soft computing paradigm that has emerged in computer science This book is the interface between these primary sources and researchers in physics and chemistry

Analysis Of Biological Data: A Soft Computing Approach Sanghamitra Bandyopadhyay, Ujjwal Maulik, Jason T L Wang, 2007-09-03 Bioinformatics a field devoted to the interpretation and analysis of biological data using computational techniques has evolved tremendously in recent years due to the explosive growth of biological information generated by the scientific community Soft computing is a consortium of methodologies that work synergistically and provides in one form or another flexible information processing capabilities for handling real life ambiguous situations Several research articles dealing with the application of soft computing tools to bioinformatics have been published in the recent past however they are scattered in different journals conference proceedings and technical reports thus causing inconvenience to readers students and researchers This book unique in its nature is aimed at providing a treatise in a unified framework with both theoretical and experimental results describing the basic principles of soft computing and demonstrating the various ways in which they can be used for analyzing biological data in an efficient manner Interesting research articles from eminent scientists around the world are brought together in a systematic way such that the reader will

be able to understand the issues and challenges in this domain the existing ways of tackling them recent trends and future directions This book is the first of its kind to bring together two important research areas soft computing and bioinformatics in order to demonstrate how the tools and techniques in the former can be used for efficiently solving several problems in the latter

Approaching human intelligence through chemical systems: Development of unconventional chemical artificial intelligence Pier Luigi Gentili, Konrad Szaciłowski, Andrew Adamatzky, 2023-11-27

Although human intelligence is deeply investigated by neuroscientists psychologists philosophers and AI researchers we still lack of a widely accepted definition of what it is If we exploit the emergence theory from Complexity Science to give a definition we might state that human intelligence is the emergent property of the human nervous system Such fascinating emergent property allows us to handle both accurate and vague information by computing with numbers and words Moreover it allows us to reason speak and take rational decisions in an environment of uncertainty partiality and relativity of truth when the Incompatibility Principle holds As the complexity of a system increases accuracy and significance become almost mutually exclusive characteristics of our statements Finally our intelligence allows us recognizing quite easily variable patterns Therefore it is worthwhile investigating human intelligence and trying to mimic it by developing Artificial Intelligence Nowadays Artificial Intelligence is in vogue it is applied in both basic and applied science Traditionally there are two strategies to develop Artificial Intelligence A strategy consists in writing human like intelligent software running in von Neumann computers or special purpose hardware The other strategy consists in neuromorphic engineering Neuromorphic engineering implements surrogates of neurons through non biological systems either for neuro prosthesis or to design brain like computing machines A third strategy is now blooming and it consists in using molecular supramolecular materials and systems chemistry to mimic some basic functions of human intelligence such as Boolean multi valued logic gates and Fuzzy logic This third strategy is originating Chemical Artificial Intelligence CAI A relevant purpose of CAI is to design modules for Chemical Robots A Chemical Robot is thought of as a molecular assembly that reacts autonomously to its environment by probing it with molecular sensors making decisions by its intrinsic Artificial Neural Networks or logic gates and performing actions upon its environment through molecular effectors The intelligent activities of any Chemical Robot should be sustained energetically by a metabolic unit Chemical Robots should be easily miniaturized and implanted in living beings to interplay with cells or organelles for biomedical applications They should become auxiliary elements of the natural immune system
