Software Reusability Vol II Applications And Experience:

Software Reuse James W. Hooper, Rowena O. Chester, 2012-12-06 Observers in the present usually have an advantage when it comes to interpreting events of the past In the case of software reuse how ever it is unclear why an idea that has gained such universal acceptance was the source of swirling controversy when it began to be taken seriously by the software engineering community in the mid 1980 s From a purely conceptual point of view the reuse of software designs and components promises nearly risk free benefits to the developer Virtually every model of software cost and development effort predicts first order dependencies on either products size or the number of steps carried out in development Reduce the amount of new product to be developed and the cost of producing the product decreases Remove development steps and total effort is reduced By reusing previously developed engineering products the amount of new product and the number of development steps can be reduced In this way reuse clearly has a major influence on reducing total development cost and effort This of course raises the issue of from whence the reused products arise There has to be a prior investment in creating libraries of reuse products before reuse can be successful How can organizations with a bottom line orientation be enticed into contributing to a reuse venture Fortunately the economics of reuse resembles many other financial investment situations

Software Reuse: Methods, Techniques, and Tools Jan Bosch, Charles Krueger, 2004-06-14 After three decades of research and practice reuse of existing software artefacts remains the most promising approach to decreasing effort for software development and evolution increasing quality of software artefacts and decreasing time to market of software products Over time we have seen impressive improvements in extra organizational reuse e g COTS as well as in intra organizational reuse e g software product families Despite the successes that we as a community have achieved several challenges remain to be addressed The theme for this eighth meeting of the premier international conference on software reuse is the management of software variability for reusable software All reusable software operates in multiple contexts and has to accommodate the differences between these contexts through variation In modern software the number of variation points may range in the thousands with an even larger number of dependencies between these points Topics addressing the theme include the representation design assessment and evolution of software variability The proceedings that you are holding as you read this report on the current state of the art in software reuse Topics covered in the proceedings include software variability testing of reusable software artefacts feature modeling aspect oriented software development composition of components and services model based approaches and several other aspects of software reuse May 2004 Jan Bosch Charles Krueger Organizing Committee General Chair Kyo C Kang Pohang University of Science and Technology Korea Program Co chairs Jan Bosch University of Groningen The Netherlands Charles Krueger BigLever Software Inc U S A

Software Product Lines Gary J. Chastek, 2003-08-02 Software product lines are emerging as an important new paradigm for software development Product lines are enabling organizations to achieve impressive time to market gains and cost

reductions In 1997 we at the Software Engineering Institute SEI launched a Product Line Practice Initiative Our vision was that product line development would be a low risk high return proposition for the entire software engineering community It was our hope from the beginning that there would eventually be sufficient interest to hold a conference The First Software Product Line Conference SPLC1 was the realization of that hope Since SPLC1 we have seen a growing interest in software product lines Companies are launching their own software product line initiatives product line technical and business practices are maturing product line tool vendors are emerging and books on product lines are being published Motivated by the enthusiastic response to SPLC1 and the increasing number of software product lines and product line researchers and practitioners the SEI is proud to sponsor this second conference dedicated to software product lines We were gratified by the submissions to SPLC2 from all parts of the globe from government and commercial organizations From these submissions we were able to assemble a rich and varied conference program with unique opportunities for software product line novices experts and those in between This collection represents the papers selected from that response and includes research and experience reports
