simple realization that you are in control of your life is the foundation of stress management. Managing stress is all about taking charge of your thoughts, emotions, schedule, and the way you deal with problems. Stress management refers to the wide spectrum of techniques and psychotherapies aimed at controlling a person's levels of stress, especially chronic stress, usually for the purpose of improving everyday functioning. In this context, the term stress refers only to a stress with significant negative consequences or distress, in the terminology advocated by Hans Selye, rather than what he calls eustress, a stress whose consequences are helpful or otherwise positive. Stress produces numerous physical and mental symptoms which vary according to each individual's situational factors. These can include physical health decline as well as depression. The process of stress management is named as one of the keys to a happy and successful life in modern society. Although life provides numerous demands that can prove difficult to handle, stress management provides a number of ways to manage anxiety and maintain overall well-being. Despite stress often being thought of as a subjective experience, levels of stress are readily measurable using various physiological tests similar to those used in polygraphs. Many practical stress management techniques are available, some for use by health professionals and others for self-help, which may help an individual reduce their levels of stress, provide positive feelings of control over one's life, and promote general well-being.

The book provides very worthwhile and practical information in such areas as compositions, trade names, common names, specifications, both U.S. and foreign available products, forms, typical applications, and properties, mechanical, fabricating, and selected others. This comprehensive resource also covers the more uncommon alloys by groups in the same datasheet format. Included are refractory metals and alloys: molybdenum, tungsten, niobium, tantalum, beryllium, copper alloys, cast and P/M titanium parts, P/M aluminum parts, lead and lead alloys, tin-rich alloys, and sintering copper base materials: copper, tin, bronze, brass, nickel, silvers.
