Uniform Output Regulation Of Nonlinear S:

Uniform Output Regulation of Nonlinear Systems Alexey Pavlov, Nathan van de Wouw, Hendrik Nijmeijer, 2006 This study of the nonlinear output regulation problem embraces local as well as global cases covering such aspects as controller design and practical implementation issues From the reviews The authors treat the problem of output regulation for a nonlinear control system they develop a global approach to output regulation along familiar lines I found the book to be ambitious and rigorous tackling some hard conceptual issues IEEE TRANSACTIONS ON AUTOMATIC CONTROL *Nonlinear Systems* Nathan van de Wouw, Erjen Lefeber, Ines Lopez Arteaga, 2016-07-07 This treatment of modern topics related to the control of nonlinear systems is a collection of contributions celebrating the work of Professor Henk Nijmeijer and honoring his 60th birthday It addresses several topics that have been the core of Professor Nijmeijer's work namely the control of nonlinear systems geometric control theory synchronization coordinated control convergent systems and the control of underactuated systems The book presents recent advances in these areas contributed by leading international researchers in systems and control In addition to the theoretical questions treated in the text particular attention is paid to a number of applications including mobile robotics marine vehicles neural dynamics and mechanical systems generally This volume provides a broad picture of the analysis and control of nonlinear systems for scientists and engineers with an interest in the interdisciplinary field of systems and control theory The reader will benefit from the expert participants ideas on important open problems with contributions that represent the state of the art in nonlinear control

A Practical Guide to Geometric Regulation for Distributed Parameter Systems Eugenio Aulisa, David Gilliam, 2015-06-18 A Practical Guide to Geometric Regulation for Distributed Parameter Systems provides an introduction to geometric control design methodologies for asymptotic tracking and disturbance rejection of infinite dimensional systems The book also introduces several new control algorithms inspired by geometric invariance and asymptotic attraction for a wide class of systems

Lectures in Feedback Design for Multivariable Systems Alberto Isidori, 2016-08-12 This book focuses on methods that relate in one form or another to the small gain theorem It is aimed at readers who are interested in learning methods for the design of feedback laws for linear and nonlinear multivariable systems in the presence of model uncertainties With worked examples throughout it includes both introductory material and more advanced topics Divided into two parts the first covers relevant aspects of linear systems theory the second nonlinear theory In order to deepen readers understanding simpler single input single output systems generally precede treatment of more complex multi input multi output MIMO systems and linear systems precede nonlinear systems This approach is used throughout including in the final chapters which explain the latest advanced ideas governing the stabilization regulation and tracking of nonlinear MIMO systems Two major design problems are considered both in the presence of model uncertainties asymptotic stabilization with a guaranteed region of attraction of a given equilibrium point and asymptotic rejection of the effect of exogenous disturbance inputs on selected regulated outputs Much of the

introductory instructional material in this book has been developed for teaching students while the final coverage of nonlinear MIMO systems offers readers a first coordinated treatment of completely novel results The worked examples presented provide the instructor with ready to use material to help students to understand the mathematical theory Readers should be familiar with the fundamentals of linear systems and control theory This book is a valuable resource for students following postgraduate programs in systems and control as well as engineers working on the control of robotic mechatronic and power systems
