Unit Processes in Organic Synthesis ... Fourth Edition Philip Herkimer Groggins, 1952 **Mono-Olefins F. Asinger**, 2013-10-22 Mono Olefins Chemistry and Technology is a translation from the German and deals with the study of olefins from low ethylene to hexenes and olefins from the high hexenes to eicosenes The book describes the gaseous or low boiling olefins and the higher normally liquid olefins which have only a minor role in applications in the chemical industry The olefins are considered important as they are added in the distillation of off gases in refineries Although the liquid olefins are used sparingly these are needed to manufacture lubricants synthetic detergents and the higher aliphatic alcohols The book then explains the three processes used to separate olefin containing mixtures of gases into fractions by the C number or to convert olefins in the pure state distillation absorption and adsorption The author then describes the processes in manufacturing carburetor fuel from petroleum and natural gases Petroleum oil is a mixture of paraffinic naphthenic and aromatic hydrocarbons and has no olefins The text describes the complete process of refining petroleum into different products such as gasoline kerosene lubricants and spotting benzenes Then the book explains the polymerization of olefins to produce carburetor fuels either by the thermal method or catalytic method The text notes some research made into double bond isomerization in mono olefins and their possible applications This book is beneficial to industrial chemists researchers technical designers and engineers whose works are related with oil refinery and fossil fuels
