Integrated Network Management VIII Germán Goldszmidt, Schönwälder Jürgen, 2013-06-05 Welcome to 1M 2003 the eighth in a series of the premier international technical conference in this field As IT management has become mission critical to the economies of the developed world our technical program has grown in relevance strength and quality Over the next few years leading IT organizations will gradually move from identifying infrastructure problems to providing business services via automated intelligent management systems To be successful these future management systems must provide global scalability for instance to support Grid computing and large numbers of pervasive devices In Grid environments organizations can pool desktops and servers dynamically creating a virtual environment with huge processing power and new management challenges As the number type and criticality of devices connected to the Internet grows new innovative solutions are required to address this unprecedented scale and management complexity The growing penetration

of technologies such as WLANs introduces new management challenges particularly for performance and security Management systems must also support the management of business processes and their supporting technology infrastructure as integrated entities They will need to significantly reduce the amount of adventitious bootless data thrown at consoles delivering instead a cogent view of the system state while leaving the handling of lower level events to self managed multifarious systems and devices There is a new emphasis on autonomic computing building systems that can perform routine tasks without administrator intervention and take prescient actions to rapidly recover from potential software or hardware failures
