Howlett, 2013-05-14 The field of agent and multi agent systems is concerned with the development and evaluation of sophisticated AI based problem solving and control architectures for both single and multi agent systems This book presents the proceedings of the 7th KES Conference on Agent and Multi agent Systems Technologies and Applications KES AMSTA 2013 held in Hue City Vietnam in May 2013 The KES AMSTA 2013 conference provides an internationally respected forum for scientific research in the technologies and applications of agent and multi agent systems In all 44 papers were selected for oral presentation and publication in this volume Special attention is paid to the feature topics of intelligent technologies and applications in the area of e health social networking self organizing systems economics and trust management Other topics covered include agent oriented software engineering beliefs engineering desires and intentions representation agent cooperation coordination negotiation organization and communication distributed problem solving specification of agent communication languages formalization of ontologies and conversational agents The book highlights new trends and challenges in agent and multi agent research and will be of interest to the research community working in the fields of artificial intelligence collective computational intelligence robotics dialogue systems and in particular agent and multi agent systems technologies and applications

Programming Multi-Agent Systems Koen V. Hindriks, Alexander Pokahr, Sebastian Sardina, 2009-07-14 These are the proceedings of the International Workshop on Programming Multi Agent Systems ProMAS 2008 the sixth of a series of workshops that is aimed at discussing and providing an overview of current state of the art technology for programming multi agent systems The aim of the ProMAS workshop series is to promote research on programming technologies and tools

that can effectively contribute to the development and deployment of multi agent systems In particular the workshop promotes the discussion and exchange of ideas concerning the techniques concepts requirements and principles that are important for establishing multi agent programming platforms that are useful in practice and have a theoretically sound basis Topics addressed include but are not limited to the theory and applications of agent programming languages the verification and analysis of agent systems as well as the implementation of social structure in agent based systems e.g. roles within organizations coordination and communication in multi agent systems In its previous editions ProMAS constituted an invaluable occasion bringing together leading researchers from both academia and industry to discuss issues on the design of programming languages and tools for multi agent systems We were very pleased to be able to again present a range of high quality papers at ProMAS 2008 After five successful editions of the ProMAS workshop series which took place during AAMAS 2003 Melbourne Australia AAMAS 2004 New York USA AAMAS 2005 Utrecht The Netherlands AAMAS 2006 Hakodate Japan and AAMAS 2007 Honolulu Hawaii the sixth edition took place on May 13 in Estoril Portugal in conjunction with AAMAS 2008 the main international conference on autonomous agents and MAS

Agent Technology and e-Health Roberta Annicchiarico, Ulises Cortes Garcia, Cristina Urdiales, 2008-04-05 Multi agent systems are one of the most exciting research areas in Artificial Intelligence This book reports on the results achieved in this area discusses the benefits and drawbacks that agent based systems may bring to medical domains and society and also provides a list of the research topics that should be tackled in the near future to make the deployment of health care agent based systems a reality Current topics of research include communication and co operation between distributed intelligent agents to manage patient care

Multi-Agent Systems Adelinde M. Uhrmacher, Danny Weyns, 2018-10-08 Methodological Guidelines for Modeling and Developing MAS Based Simulations The intersection of agents modeling simulation and application domains has been the subject of active research for over two decades Although agents and simulation have been used effectively in a variety of application domains much of the supporting research remains scattered in the literature too often leaving scientists to develop multi agent system MAS models and simulations from scratch Multi Agent Systems Simulation and Applications provides an overdue review of the wide ranging facets of MAS simulation including methodological and application oriented guidelines This comprehensive resource reviews two decades of research in the intersection of MAS simulation and different application domains It provides scientists and developers with disciplined engineering approaches to modeling and developing MAS based simulations After providing an overview of the field's history and its basic principles as well as cataloging the various simulation engines for MAS the book devotes three sections to current and emerging approaches and applications Simulation for MAS explains simulation support for agent decision making the use of simulation for the design of self organizing systems the role of software architecture in simulating MAS and the use of simulation for studying learning and stigmergic interaction MAS for Simulation discusses an agent based framework for symbiotic simulation the use of country databases and expert systems for

agent based modeling of social systems crowd behavior modeling agent based modeling and simulation of adult stem cells and agents for traffic simulation Tools presents a number of representative platforms and tools for MAS and simulation including Jason James II SeSAM and RoboCup Rescue Complete with over 200 figures and formulas this reference book provides the necessary overview of experiences with MAS simulation and the tools needed to exploit simulation in MAS for future research in a vast array of applications including home security computational systems biology and traffic management

**Intelligent Decision Support Systems in Agent-mediated Environments** Gloria E. Phillips-Wren, L. C. Jain, 2005 Research has shown that harassed decision makers in decision support technologies for real time and uncertain decision problems often ignore crucial information use inefficient strategies and generate fewer alternatives Examples of such problems are medical emergencies traffic flow and military applications Researchers are limited by a narrow understanding of the most effectual methods to support decision making in real time

and stressful situations Intelligent software agents offer one approach to operationalizing a decision making support system in these circumstances by providing an environment that can adapt to speed and change Agent technology has been used to aid and automate complex problem solving such as brokering in electronic commerce and financial services An agent is a software package that carries out tasks for others autonomously whether the others are human users business processes workflows or applications
