Languages and Compilers for Parallel Computing Bill Pugh,Chau-Wen Tseng,2005-12-17 The 15th Workshop on Languages and Compilers for Parallel Computing was held in July 2002 at the University of Maryland College Park It was jointly sponsored by the Department of Computer Science at the University of Maryland and the University of Maryland

Institute for Advanced Computer Studies UMIACS LCPC2002 brought together over 60 researchers from academia and research institutions from many countries. The program of 26 papers was selected from 32 submissions. Each paper was reviewed by at least three Program Committee members and sometimes by additional reviewers. Prior to the workshop, revised versions of accepted papers were informally published on the workshop's website and in a paper proceedings that was distributed at the meeting. This year the workshop was organized into sessions of papers on related topics and each session consisted of two to three 30-minute presentations. Based on feedback from the workshop, the papers were revised and submitted for inclusion in the formal proceedings published in this volume. Two papers were presented at the workshop but later withdrawn from the proceedings by their authors. We were very lucky to have Bill Carlson from the Department of Defense give the LCPC 2002 keynote speech on UPC: A C Language for Shared Memory Parallel Programming. Bill gave an excellent overview of the features and programming model of the UPC parallel programming language.

It features dozens of step-by-step learn-by-example procedures demonstrating how to apply complex solutions in real-world data center environments. Author Bill Calkins has administered and taught Oracle Solaris and its predecessors for more than twenty years. He also helped develop the newest Oracle Certified Associate (OCA) and Oracle Certified Professional (OCP) exams which raise the bar for Solaris certification. This guide covers every new 1Z0-821 exam topic in detail and also covers many 1Z0-822 exam topics. Calkins also reviews the changes that system administrators will face when upgrading to Solaris 11.1 and presents new ways to perform familiar tasks on both SPARC and x86 hardware. You'll learn how to install the Solaris 11 Operating Environment with Live Media or Text Interactive installers. Install, manage, and update software with the Image Packaging System and IPS repositories. Understand, customize, and troubleshoot SPARC and x86 boot processes from system power up to loading the OS, including coverage of ILOM, OpenBoot, and GRUB 2.
