The Handbook for the Future of Work Julie MacLeavy, Frederick Harry Pitts, 2024-12-26 The Handbook for the Future of Work offers a timely and critical analysis of the transformative forces shaping work and employment in the twenty first century Focusing on the past two decades the handbook explores how technological advancements automation and a shifting capitalist landscape have fundamentally reshaped work practices and labour relations Beyond simply outlining the challenges and opportunities of automation the handbook integrates these emerging realities with established discussions of work Importantly it moves beyond dominant technology centric narratives probing into broader questions about the nature of capitalism in a time of crisis and the contestation for alternative economic models With contributions from established and emerging authors based in institutions around the world the handbook offers a systematic overview of the developments that have sparked radical shifts in how we live and work and their multifaceted impacts upon social relations and identities practices and sectors politics and environments The handbook is unique in its exploration of the potential for economic transformations to reshape the centrality of work in our social and political imaginaries A useful resource for students and researchers the handbook serves as an essential guide to this new intellectual landscape

Gender, Technology, and the Future of Work Mariya Brussevich, Ms. Era Dabla-Norris, Christine Kamunge, Pooja Karnane, Salma Khalid, Ms. Kalpana Kochhar, 2018-10-09 New technologies digitalization artificial intelligence and machine learning are changing the way work gets done at an unprecedented rate Helping people adapt to a fast changing world of work and ameliorating its deleterious impacts will be the defining challenge of our time What are the gender implications of this changing nature of work How vulnerable are women s jobs to risk of displacement by technology What policies are needed to ensure that technological change supports a closing and not a widening of gender gaps This SDN finds that women on average perform more routine tasks than men across all sectors and occupations tasks that are most prone to automation Given the current state of technology we estimate that 26 million female jobs in 30 countries 28 OECD member countries Cyprus and Singapore are at a high risk of being displaced by technology i e facing higher than 70 percent likelihood of being automated within the next

two decades Female workers face a higher risk of automation compared to male workers 11 percent of the female workforce relative to 9 percent of the male workforce albeit with significant heterogeneity across sectors and countries Less well educated and older female workers aged 40 and above as well as those in low skill clerical service and sales positions are disproportionately exposed to automation Extrapolating our results we find that around 180 million female jobs are at high risk of being displaced globally Policies are needed to endow women with required skills close gender gaps in leadership positions bridge digital gender divide as ongoing digital transformation could confer greater flexibility in work benefiting women ease transitions for older and low skilled female workers
