Some Nonlinear Problems In Riemannian Geometry:

Some Nonlinear Problems in Riemannian Geometry Thierry Aubin, 1998-06-22 This book deals with such important subjects as variational methods the continuity method parabolic equations on fiber bundles ideas concerning points of concentration blowing up technique geometric and topological methods It explores important geometric problems that are of interest to many mathematicians and scientists but have only recently been partially solved *Some Nonlinear Problems in Riemannian Geometry* Thierry Aubin, 1998-12-01

Some Nonlinear Problems in Riemannian Geometry Thierry Aubin, 2014-01-15 **Some Nonlinear Problems in Riemannian Geometry** Thierry Aubin, 2013-03-09 During the last few years the field of nonlinear problems has undergone great development This book consisting of the updated Grundlehren volume 252 by the author and of a newly written part deals with some important geometric problems that are of interest to many mathematicians and scientists but have only recently been partially solved Each problem is explained up to date results are given and proofs are presented Thus the reader is given access for each specific problem to its present status of solution as well as to the most up to date methods for approaching it The main objective of the book is to explain some methods and new techniques and to apply them It deals with such important subjects as variational methods the continuity method parabolic equations on fiber

Nonlinear Analysis on Manifolds. Monge-Ampère Equations Thierry Aubin, 1982

Nonlinear Analysis on Manifolds. Monge-Ampère Equations T. Aubin, 1982-12-15 This volume is intended to allow mathematicians and physicists especially analysts to learn about nonlinear problems which arise in Riemannian Geometry Analysis on Riemannian manifolds is a field currently undergoing great development More and more analysis proves to be a very powerful means for solving geometrical problems Conversely geometry may help us to solve certain problems in analysis There are several reasons why the topic is difficult and interesting It is very large and almost unexplored On the other hand geometric problems often lead to limiting cases of known problems in analysis sometimes there is even more than one approach and the already existing theoretical studies are inadequate to solve them Each problem has its own particular difficulties Nevertheless there exist some standard methods which are useful and which we must know to apply them One should not forget that our problems are motivated by geometry and that a geometrical argument may simplify the problem under investigation Examples of this kind are still too rare This work is neither a systematic study of a mathematical field nor the presentation of a lot of theoretical knowledge On the contrary I do my best to limit the text to the essential knowledge I define as few concepts as possible and give only basic theorems which are useful for our topic But I hope that the reader will find this sufficient to solve other geometrical problems by analysis **On Some Aspects of the Theory of Anosov**

Systems Grigorii A. Margulis, 2003-12-03 The seminal 1970 Moscow thesis of Grigoriy A Margulis published for the first time Entitled On Some Aspects of the Theory of Anosov Systems it uses ergodic theoretic techniques to study the distribution of periodic orbits of Anosov flows The thesis introduces the Margulis measure and uses it to obtain a precise asymptotic formula

for counting periodic orbits This has an immediate application to counting closed geodesics on negatively curved manifolds The thesis also contains asymptotic formulas for the number of lattice points on universal coverings of compact manifolds of negative curvature The thesis is complemented by a survey by Richard Sharp discussing more recent developments in the theory of periodic orbits for hyperbolic flows including the results obtained in the light of Dolgopyat's breakthroughs on bounding transfer operators and rates of mixing

Variational Problems in Riemannian Geometry Paul Baird, Ahmad El Soufi, Ali Fardoun, Rachid Regbaoui, 2004-03-26 This book collects invited contributions by specialists in the domain of elliptic partial differential equations and geometric flows The articles provide a balance between introductory surveys and the most recent research with a unique perspective on singular phenomena Notions such as scans and the study of the evolution by curvature of networks of curves are completely new and lead the reader to the frontiers of the domain The intended readership are postgraduate students and researchers in the fields of elliptic and parabolic partial differential equations that arise from variational problems as well as researchers in related fields such as particle physics and optimization

Handbook of Geometric Analysis Lizhen Ji, 2008 Geometric Analysis combines differential equations with differential geometry An important aspect of geometric analysis is to approach geometric problems by studying differential equations Besides some known linear differential operators such as the Laplace operator many differential equations arising from differential geometry are nonlinear A particularly important example is the Monge Ampere equation Applications to geometric problems have also motivated new methods and techniques in differential equations The field of geometric analysis is broad and has had many striking applications This handbook of geometric analysis the first of the two to be published in the ALM series presents introductions and survey papers treating important topics in geometric analysis with their applications to related fields It can be used as a reference by graduate students and by researchers in related areas Back cover
