The 24 Doors:

Case-Based Learning Janet L. Kolodner, 2012-12-06 Case based reasoning means reasoning based on remembering previous experiences A reasoner using old experiences cases might use those cases to suggest solutions to problems to point out potential problems with a solution being computed to interpret a new situation and make predictions about what might happen or to create arguments justifying some conclusion A case based reasoner solves new problems by remembering old situations and adapting their solutions It interprets new situations by remembering old similar situations and comparing and contrasting the new one to old ones to see where it fits best Case based reasoning combines reasoning with learning It spans the whole reasoning cycle A situation is experienced Old situations are used to understand it Old situations are used to solve a problem if there is one to be solved Then the new situation is inserted into memory alongside the cases it used for reasoning to be used another time The key to this reasoning method then is remembering Remembering has two parts integrating cases or experiences into memory when they happen and recalling them in appropriate situations later on The case based reasoning community calls this related set of issues the indexing problem In broad terms it means finding in memory the experience closest to a new situation In narrower terms it can be described as a two part problem assigning indexes or labels to experiences when they are put into memory that describe the situations to which they are applicable so that they can be recalled later and at recall time elaborating the new situation in enough detail so that the indexes it would have if it were in the memory are identified Case Based Learning is an edited volume of original research comprising invited contributions by leading workers This work has also been published as a special issues of MACHINE LEARNING Volume 10 No 3 Annual Report of the Commissioner of Patents United States.
