Using Algebraic Geometry Graduate Texts In Mathematics S:

Using Algebraic Geometry David A. Cox,John Little,DONAL OSHEA,2013-04-17 In recent years the discovery of new algorithms for dealing with polynomial equations coupled with their implementation on fast inexpensive computers has sparked a minor revolution in the study and practice of algebraic geometry These algorithmic methods have also given rise to some exciting new applications of algebraic geometry This book illustrates the many uses of algebraic geometry highlighting some of the more recent applications of Grobner bases and resultants In order to do this the authors provide an introduction to some algebraic objects and techniques which are more advanced than one typically encounters in a first course but nonetheless of great utility The book is written for nonspecialists and for readers with a diverse range of backgrounds It assumes knowledge of the material covered in a standard undergraduate course in abstract algebra and it would help to have some previous exposure to Grobner bases The book does not assume the reader is familiar with more advanced concepts such as modules *Topics in Algebraic Geometry and Geometric Modeling* Ron Goldman,Rimvydas Krasauskas,2003 Algebraic geometry and geometric modeling both deal with curves and surfaces generated by polynomial equations Algebraic geometry investigates the theoretical properties of polynomial curves and surfaces geometric modeling uses polynomial piecewise polynomial and rational curves and surfaces to build computer models of mechanical components and assemblies for industrial design and manufacture The NSF sponsored the four day Vilnius Workshop on Algebraic Geometry and Geometric Modeling which brought together some of the top experts in the two research communities to examine a wide range of topics of interest to both fields This volume is an outgrowth of that workshop Included are surveys tutorials and research papers In addition the editors have included a translation of Minding s 1841 paper On the determination of the degree of an equations obtained by elimination which foreshadows the modern application of mixed volumes in algebraic geometry The volume is suitable for mathematicians computer scientists and engineers interested in applications of algebraic geometry to geometric modeling **Algebraic Geometry** Robin Hartshorne,2013-06-29 Robin Hartshorne studied algebraic geometry with Oscar Zariski and David Mumford at Harvard and with J P Serre and A Grothendieck in Paris After receiving his Ph D from Princeton in 1963 Hartshorne became a Junior Fellow at Harvard then taught there for several years In 1972 he moved to California where he is now Professor at the University of California at Berkeley He is the author of Residues and Duality 1966 Foundations of Projective Geometry 1968 Ample Subvarieties of Algebraic Varieties 1970 and numerous research titles His current research interest is the geometry of projective varieties and vector bundles He has been a visiting professor at the College de France and at Kyoto University where he gave lectures in French and in Japanese respectively Professor Hartshorne is married to Edie Churchill educator and psychotherapist and has two sons He has travelled widely speaks several foreign languages and is an experienced mountain climber He is also an accomplished amateur musician he has played the flute for many years and during his last visit to Kyoto he began studying the shakuhachi **Arithmetically**

Cohen-Macaulay Sets of Points in P^1 x P^1 Elena Guardo,Adam Van Tuyl,2015-11-25 This brief presents a solution to the interpolation problem for arithmetically Cohen Macaulay ACM sets of points in the multiprojective space P 1 x P 1 It collects the various current threads in the literature on this topic with the aim of providing a self contained unified introduction while also advancing some new ideas The relevant constructions related to multiprojective spaces are reviewed first followed by the basic properties of points in P 1 x P 1 the bigraded Hilbert function and ACM sets of points The authors then show how using a combinatorial description of ACM points in P 1 x P 1 the bigraded Hilbert function can be computed and as a result solve the interpolation problem In subsequent chapters they consider fat points and double points in P 1 x P 1 and demonstrate how to use their results to answer questions and problems of interest in commutative algebra Throughout the book chapters end with a brief historical overview citations of related results and where relevant open questions that may inspire future research Graduate students and researchers working in algebraic geometry and commutative algebra will find this book to be a valuable contribution to the literature **Handbook of Design and Analysis of Experiments** Angela Dean,Max Morris,John Stufken,Derek Bingham,2015-06-26 This carefully edited collection synthesizes the state of the art in the theory and applications of designed experiments and their analyses It provides a detailed overview of the tools required for the optimal design of experiments and their analyses The handbook covers many recent advances in the field including designs for nonlinear models and algorithms applicable to a wide variety of design problems It also explores the extensive use of experimental designs in marketing the pharmaceutical industry engineering and other areas *Rational Algebraic Curves* J. Rafael Sendra,Franz Winkler,Sonia Pérez-Diaz,2007-12-10 The central problem considered in this introduction for graduate students is the determination of rational parametrizability of an algebraic curve and in the positive case the computation of a good rational parametrization This amounts to determining the genus of a curve its complete singularity structure computing regular points of the curve in small coordinate fields and constructing linear systems of curves with prescribed intersection multiplicities The book discusses various optimality criteria for rational parametrizations of algebraic curves **Analytic Combinatorics in Several Variables** Robin Pemantle,Mark C. Wilson,2013-05-31 Aimed at graduate students and researchers in enumerative combinatorics this book is the first to treat the analytic aspects of combinatorial enumeration from a multivariate perspective **Diophantine Approximation** Robert F. Tichy,Hans Peter Schlickewei,Klaus Schmidt,2008-07-10 This volume contains 22 research and survey papers on recent developments in the field of diophantine approximation The first article by Hans Peter Schlickewei is devoted to the scientific work of Wolfgang Schmidt Further contributions deal with the subspace theorem and its applications to diophantine equations and to the study of linear recurring sequences The articles are either in the spirit of more classical diophantine analysis or of geometric or combinatorial flavor In particular estimates for the number of solutions of diophantine equations as well as results concerning congruences and polynomials are established Furthermore the volume contains transcendence results for special

functions and contributions to metric diophantine approximation and to discrepancy theory The articles are based on lectures given at a conference at the Erwin Schr6dinger Institute in Vienna in 2003 in which many leading experts in the field of diophantine approximation participated The editors are very grateful to the Erwin Schr6dinger Institute and to the FWF Austrian Science Fund for the financial support and they express their particular thanks to Springer Verlag for the excellent cooperation Robert E Tichy Diophantine Approximation H E Schlickewei et al Editors 9 Springer Verlag 2008 THE MATHEMATICAL WORK OF WOLFGANG SCHMIDT Hans Peter Schlickewei Mathematik Informatik und Philipps Universitiit Hans Meerwein Strasse Marburg 35032 Marburg Germany k Introduction Wolfgang Schmidt s mathematical activities started more than fifty years ago in 1955 In the meantime he has written more than 180 papers many of them containing spectacular results and breakthroughs in different areas of number theory   Recent Developments in Lie Algebras, Groups and Representation Theory Kailash C. Misra,Daniel Ken Nakano,Brian Parshall,2012 This book contains the proceedings of the 2009 2011 Southeastern Lie Theory Workshop Series held October 9 11 2009 at North Carolina State University May 22 24 2010 at the University of Georgia and June 1 4 2011 at the University of Virginia Some of the articles written by experts in the field survey recent developments while others include new results in Lie algebras quantum groups finite groups and algebraic groups   **Computer Algebra in Scientific Computing** Vladimir P. Gerdt,Wolfram Koepf,Werner M. Seiler,Evgenii V. Vorozhtsov,2015-09-10 This book constitutes the proceedings of the 17th International Workshop on Computer Algebra in Scientific Computing CASC 2015 held in Aachen Germany in September 2015 The 35 full papers presented in this volume were carefully reviewed and selected from 42 submissions They deal with the ongoing progress both in theoretical computer algebra and its expanding applications New and closer interactions are fostered by combining the area of computer algebra methods and systems and the application of the tools of computer algebra for the solution of problems in scientific computing   **Algebraic Foundations for Applied Topology and Data Analysis** Hal Schenck,2022-11-21 This book gives an intuitive and hands on introduction to Topological Data Analysis TDA Covering a wide range of topics at levels of sophistication varying from elementary matrix algebra to esoteric Grothendieck spectral sequence it offers a mirror of data science aimed at a general mathematical audience The required algebraic background is developed in detail The first third of the book reviews several core areas of mathematics beginning with basic linear algebra and applications to data fitting and web search algorithms followed by quick primers on algebra and topology The middle third introduces algebraic topology along with applications to sensor networks and voter ranking The last third covers key contemporary tools in TDA persistent and multiparameter persistent homology Also included is a user s guide to derived functors and spectral sequences useful but somewhat technical tools which have recently found applications in TDA and an appendix illustrating a number of software packages used in the field Based on a course given as part of a masters degree in statistics the book is appropriate for graduate students   Algebraic Geometry and Arithmetic Curves Qing Liu,Reinie

Erne,2006-06-29 This book is a general introduction to the theory of schemes followed by applications to arithmetic surfaces and to the theory of reduction of algebraic curves The first part introduces basic objects such as schemes morphisms base change local properties normality regularity Zariski s Main Theorem This is followed by the more global aspect coherent sheaves and a finiteness theorem for their cohomology groups Then follows a chapter on sheaves of differentials dualizing sheaves and Grothendieck s duality theory The first part ends with the theorem of Riemann Roch and its application to the study of smooth projective curves over a field Singular curves are treated through a detailed study of the Picard group The second part starts with blowing ups and desingularisation embedded or not of fibered surfaces over a Dedekind ring that leads on to intersection theory on arithmetic surfaces Castelnuovo s criterion is proved and also the existence of the minimal regular model This leads to the study of reduction of algebraic curves The case of elliptic curves is studied in detail The book concludes with the funadmental theorem of stable reduction of Deligne Mumford The book is essentially self contained including the necessary material on commutative algebra The prerequisites are therefore few and the book should suit a graduate student It contains many examples and nearly 600 exercises   **The American Mathematical Monthly** ,1921
