Using Information Technology In Mathematics Education:

Using Information Technology in Mathematics Education James Tooke, Norma Henderson, 2024-11-15 Computers have changed the ways that mathematics are taught and learned Is your institution taking advantage of what today s technology offers With contributions from researchers and practitioners alike Using Information Technology in Mathematics Education explores the impact of the computer on the curriculum the teaching and learning of mathematics and the professional development of teachers both pre service and in service As editor James Tooke states The connection between mathematics and the computer is obvious Elementary notions of mathematics gave rise to the computer advanced notions gave it a more powerful state As the computer advanced it expanded mathematics allowing the creation of further branches of the field for instance fractal geometry had no reality until the advent of high speed computers In its look at the relationship between mathematics the computer and mathematics education Using Information Technology in Mathematics Education addresses the computer as a vehicle for teaching calculus at Texas A M includes reports from several programs that have utilized the computer when teaching mathematics at lower levels of content than calculus such as intermediate algebra and geometry examines the computer s role in student learning probability discusses the use of computers in the professional development of teachers explores ways to use computers to reduce mathematics anxiety Using Information Technology in Mathematics Education examines the history and impact of computers in mathematics and mathematics education from the early crude computer assisted instruction efforts through LOGO software for elementary schools through MAPLE for the university to the Web based calculus courses now being offered by outstanding universities Use it to facilitate learning and teacher growth in your institution

Uses of Technology in Lower Secondary Mathematics Education Paul Drijvers, Lynda Ball, Bärbel Barzel, M. Kathleen Heid, Yiming Cao, Michela Maschietto, 2016-06-14 This topical survey provides an overview of the current state of the art in technology use in mathematics education including both practice oriented experiences and research based evidence as seen from an international perspective Three core themes are discussed Evidence of effectiveness Digital assessment and Communication and collaboration The survey s final section offers suggestions for future trends in technology rich mathematics education and provides a research agenda reflecting those trends Predicting what lower secondary mathematics education might look like in 2025 with respect to the role of digital tools in curricula teaching and learning it examines the question of how teachers can integrate physical and virtual experiences to promote a deeper understanding of mathematics The issues and findings presented here provide an overview of current research and offer a glimpse into a potential future characterized by the effective integration of technology to support mathematics teaching and learning at the lower secondary level

Using Mobile Technologies in the Teaching and Learning of Mathematics Nigel Calder, Kevin Larkin, Nathalie Sinclair, 2018-08-09 Mobile technologies influence the way that we interact with the world the way that we live We use them for communication entertainment information and research In education settings

there has been substantial investment in mobile devices often without a concomitant investment in developing pedagogy and practices With mobile technologies evolving rapidly and the number of educational apps growing there is a need for research into how they facilitate mathematics learning Such research is of particular importance regarding how such devices may be used to open up new ways of envisaging mathematics and mathematics education and to help develop conceptual rather than procedural or declarative knowledge This volume draws upon international research and reports on a range of research projects that have incorporated mobile technologies for mathematics education It presents research on the use of mobile technologies such as iPads iPods iPhones Androids and Tablets across a diverse range of cultures year levels and contexts It examines the ways in which mobile technologies including apps might influence students engagement cognition collaboration and attitudes through the reshaping of the learning experience In addition the book presents appropriate ways to integrate mobile technologies into teaching and learning programmes It is a significant reference book for those involved with teaching mathematics or using mobile technologies in education while also offering insights and examples that are applicable to the use of digital technologies in education generally

brewing to enrich these spaces with diverse didactical flavors A key issue is always how technology can or cannot play epistemic and pedagogic roles in the mathematics classroom The main purpose of this book is to explore mathematics task design when digital technology is part of the teaching and learning environment What features of the technology used can be capitalized upon to design tasks that transform learners experiential knowledge gained from using the technology into conceptual mathematical knowledge When do digital environments actually bring an essential educationally speaking new dimension to classroom activities What are some pragmatic and semiotic values of the technology used These are some of the concerns addressed in the book by expert scholars in this area of research in mathematics education This volume is the first devoted entirely to issues on designing mathematical tasks in digital teaching and learning environments outlining different current research scenarios

Mathematics and Technology Gilles Aldon, Fernando Hitt, Luciana Bazzini, Uwe Gellert, 2017-04-13 This volume collects most recent work on the role of technology in mathematics education It offers fresh insight and understanding of the many ways in which technological resources can improve the teaching and learning of mathematics The first section of the volume focuses on the question how a proposed mathematical task in a technological environment can influence the acquisition of knowledge and what elements are important to retain in the design of mathematical tasks in computing environments The use of white smart boards platforms as Moodle tablets and smartphones have transformed the way we communicate both inside and outside the mathematics classroom Therefore the second section discussed how to make efficient use of these resources in the classroom and beyond The third section addresses how technology modifies the way information is transmitted and how mathematical education has to take into account the new ways of learning through connected networks as well as new ways of teaching The last section is on the training of teachers in the digital era The editors of this volume have selected papers from the proceedings of the 65th 66th and 67th CIEAEM conference and invited the correspondent authors to contribute to this volume by discussing one of the four important topics The book continues a series of sourcebooks edited by CIEAEM the Commission Internationale pour l'étude et l'amélioration de l'Enseignement des Mathématiques International Commission for the Study and Improvement of Mathematics Education
