Dynamic General Equilibrium Modeling Burkhard Heer, Alfred Maussner, 2011-10-20 Modern business cycle theory and growth theory uses stochastic dynamic general equilibrium models In order to solve these models economists need to use many mathematical tools This book presents various methods in order to compute the dynamics of general equilibrium models In part I the representative agent stochastic growth model is solved with the help of value function iteration linear and linear quadratic approximation methods parameterised expectations and projection methods In order to apply these methods fundamentals from numerical analysis are reviewed in detail In particular the book discusses issues that are often neglected in existing work on computational methods e g how to find a good initial value In part II the authors discuss methods in order to solve heterogeneous agent economies In such economies the distribution of the individual state variables is endogenous This part of the book also serves as an introduction to the modern theory of distribution economics Applications include the dynamics of the income distribution over the business cycle or the overlapping generations model In an accompanying home page to this book computer codes to all applications can be downloaded [Dynamic General Equilibrium Modeling](#) Burkhard Heer, Alfred Maußner, 2024-02-21 Contemporary macroeconomics is built upon microeconomic principles with its most recent advance featuring dynamic stochastic general equilibrium models The textbook by Heer and Mau ner acquaints readers with the essential computational techniques required to tackle these models and employ them for quantitative analysis This third edition maintains the structure of the second dividing the content into three separate parts dedicated to representative agent models heterogeneous agent models and numerical methods At the same time every chapter has been revised and two entirely new chapters have been added The updated content reflects the latest advances in both numerical methods and their applications in macroeconomics spanning areas like

Documentation and Use of Dynagem Xinshen Diao,1999 **Globalization and Regional Economic Modeling**

Russel Cooper,Kieran Donaghy,Geoffrey Hewings,2007-09-23 Globalization is affecting regional economies in a broad spectrum of aspects from labor market conditions and development policies to climate change To understand better how this works we need both conceptual and methodological contributions We need new schemes to organize our thinking direct our attention and frame thought experiments on the basis of which guidance may be offered And we need methodological innovations that enable us to carry out studies and thought experiments at levels of spatial and temporal resolution and formal complexity adequate to capture and account for the phenomena that characterize globalization The chapters of this volume written by an international cast of eminent regional scientists represent contributions of both types in many cases introducing and demonstrating the use of new tools for analyzing and understanding enormous changes underway in regional economies around the world The Distributional Aspects of Social Security and Social Security Reform Martin

Feldstein,Jeffrey B. Liebman,2007-11-01 Social security is the largest and perhaps the most popular program run by the federal government Given the projected increase in both individual life expectancy and sheer number of retirees however the current system faces an eventual overload Alternative proposals have emerged ranging from reductions in future benefits to a rise in taxrevenue to various forms of investment based personal retirement accounts As this volume suggests the distributional consequences of these proposals are substantially different and may disproportionately affect those groups who depend on social security to avoid poverty in old age Together these studies persuasively show that appropriately designed investment based social security reforms can effectively reduce the long term burden of an aging society on future taxpayers increase the expected future income of retirees and mitigate poverty rates among the elderly *Dynamic Macroeconomic*

Analysis Sumru Altug,Jagjit S. Chadha,Charles Nolan,2003-11-20 Dynamic stochastic general equilibrium DSGE models have begun to dominate the field of macroeconomic theory and policy making These models describe the evolution of macroeconomic activity as a recursive sequence of outcomes based upon the optimal decision rules of rational households firms and policy makers Whilst posing a micro founded dynamic optimisation problem for agents under uncertainty such models have been shown to be both analytically tractable and sufficiently rich for meaningful policy analysis in a wide class of macroeconomic problems for example monetary and fiscal policy economic cycles and growth and capital flows This volume collects specially commissioned papers from leading researchers which pull together some of the key results in diverse areas This book will promote research using optimising models and inform researchers post graduate students and economists in policy oriented organisations of some of the key findings and policy implications **A Simple Dynamic**
