

A woman with her hair in a bun, wearing a green long-sleeved top and blue pants, is sitting in a meditative lotus position in a shallow stream. The water is clear, reflecting the woman and the surrounding greenery. Sunlight filters through the trees in the background, creating a peaceful atmosphere. A red banner with white text is positioned at the top of the image.

miRNAomics and Stress Management in Plants Peerzada Yasir Yousuf,Peerzada Arshid Shabir,Khalid Rehman Hakeem,2024-10-02 Plants being sessile are negatively affected by the biotic and abiotic environmental stresses reducing plant growth productivity and quality to a larger extent Plants have evolved different physiological biochemical and molecular mechanisms to combat these stress conditions to maintain their growth development and productivity Understanding the mechanisms involved in the plant response to stress conditions is the foremost step in the development of stress tolerant plants One of the important adaptations to stress conditions is the precise and fine regulation of gene expression in both time and space Although gene regulation occurs at different levels through different mechanisms the most crucial is at the level of transcription One of the important posttranscriptional gene regulatory mechanisms used by the plants to restore and maintain cellular homeostasis during the stress conditions are microRNAs MicroRNAs a group of approximately 22 nucleotide long non coding RNAs have recently been identified as a new class of regulators governing gene expression at the post transcriptional level MiRNAs can silence genes either by guiding the degradation of the target mRNAs or by repressing the mRNA translation Plant miRNAs have been demonstrated to regulate many genes involved in various developmental processes for example auxin signaling organ polarity radial patterning developmental transitions and secondary metabolism regulation Moreover increasing evidence indicates the role of plant miRNA guided gene regulation in response to biotic and abiotic stresses High throughput sequencing approaches have significantly elucidated the identification and functional characterization of numerous miRNAs in plants Understanding the role and mechanism of action of miRNAs during abiotic and biotic stresses can potentially offer new approaches to improve plant growth and productivity This unique book covers the different aspects of plant microRNAomics including the discovery biogenesis role in different stress conditions and applications of microRNAs in developing stress tolerant plants Chapters cover the updated knowledge in the field of plant microRNA research The book miRNAomics and Stress Management in Plants intends to demonstrate the breadth of research and the significant advances that have been made in understanding the role of miRNAs in the plant development and stress management This comprehensive volume will be of value to plant physiologists plant biochemists geneticists molecular biologists agronomists environmental researchers and graduate and undergraduate students of plant science
