The Music Theory of Godfrey Winham Leslie David Blasius, 2014-07-14 This book serves as an introduction to the work of Godfrey Winham an influential figure in American music theory circles in the 1960s Little published in his lifetime Winham left behind at his premature death in 1974 a massive collection of notes correspondence unfinished articles sketches for books etc These notes were transcribed and deposited in the Special Collections of Firestone Library at Princeton University They cover a fascinating range of subjects exercises in analytical logic thoughts on the construction of a formally consistent music theory studies of particular pieces and an epistemological reconception of Schenker's analysis In *The Music Theory of Godfrey Winham* Leslie David Blasius attempts to synthesize the various aspects of the theorist's thinking into a single coherent if unfinished endeavor Blasius concentrates in particular on Winham's attempts to define formally the basic terms of music theory his axiomatic phenomenology of pitch and harmonic relations his tentative steps towards an axiomatic phenomenology of rhythm and his fresh consideration of the reciprocal relationship between theory and analysis In so doing Blasius gives a clear picture of the materials in the archives particularly when they exhibit Winham's multiple attempts to come to terms with a specific problem The volume includes a set of complete excerpts of materials cited in Blasius's text and an index for the entire collection Originally published in 1997 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905

**Conceptual Atomism and the Computational Theory of Mind** John-Michael Kuczynski, 2007-01-01 What is it to have a concept What is it to make an inference What is it to be rational On the basis of recent developments in semantics a number of authors have embraced answers to these questions that have radically

counterintuitive consequences for example One can rationally accept self contradictory propositions e g Smith is a composer and Smith is not a composer Psychological states are causally inert beliefs and desires do nothing The mind cannot be understood in terms of folk psychological concepts e g belief desire intention One can have a single concept without having any others an otherwise conceptless creature could grasp the concept of justice or of the number seven Thoughts are sentence tokens and thought processes are driven by the syntactic not the semantic properties of those tokens In the first half of Conceptual Atomism and the Computational Theory of Mind John Michael Kuczynski argues that these implausible but widely held views are direct consequences of a popular doctrine known as content externalism this being the view that the contents of one s mental states are constitutively dependent on facts about the external world Kuczynski shows that content externalism involves a failure to distinguish between on the one hand what is literally meant by linguistic expressions and on the other hand the information that one must work through to compute the literal meanings of such expressions The second half of the present work concerns the Computational Theory of Mind CTM Underlying CTM is an acceptance of conceptual atomism the view that a creature can have a single concept without having any others and also an acceptance of the view that concepts are not descriptive i e that one can have a concept of a thing without knowing of any description that is satisfied by that thing Kuczynski shows that both views are false one reason being that they presuppose the truth of content externalism another being that they are incompatible with the epistemological anti foundationalism proven correct by Wilfred Sellars and Laurence Bonjour Kuczynski also shows that CTM involves a misunderstanding of terms such as computation syntax algorithm and formal truth and he provides novel analyses of the concepts expressed by these terms Series A
