Chivukula,Xinghao Yang,Bo Liu,Wei Liu,Wanlei Zhou,2023-03-06 A critical challenge in deep learning is the vulnerability of deep learning networks to security attacks from intelligent cyber adversaries Even innocuous perturbations to the training data can be used to manipulate the behaviour of deep networks in unintended ways In this book we review the latest

developments in adversarial attack technologies in computer vision natural language processing and cybersecurity with regard to multidimensional textual and image data sequence data and temporal data In turn we assess the robustness properties of deep learning networks to produce a taxonomy of adversarial examples that characterises the security of learning systems using game theoretical adversarial deep learning algorithms The state of the art in adversarial perturbation based privacy protection mechanisms is also reviewed We propose new adversary types for game theoretical objectives in non stationary computational learning environments Proper quantification of the hypothesis set in the decision problems of our research leads to various functional problems oracular problems sampling tasks and optimization problems We also address the defence mechanisms currently available for deep learning models deployed in real world environments The learning theories used in these defence mechanisms concern data representations feature manipulations misclassifications costs sensitivity landscapes distributional robustness and complexity classes of the adversarial deep learning algorithms and their applications In closing we propose future research directions in adversarial deep learning applications for resilient learning system design and review formalized learning assumptions concerning the attack surfaces and robustness characteristics of artificial intelligence applications so as to deconstruct the contemporary adversarial deep learning designs Given its scope the book will be of interest to Adversarial Machine Learning practitioners and Adversarial Artificial Intelligence researchers whose work involves the design and application of Adversarial Deep Learning
