Statistical Challenges In Modern Astronomy:

Statistical Challenges in Modern Astronomy V Eric D. Feigelson, Jogesh Babu, 2012-08-15 This volume contains a selection of chapters based on papers to be presented at the Fifth Statistical Challenges in Modern Astronomy Symposium The symposium will be held June 13 15th at Penn State University Modern astronomical research faces a vast range of statistical issues which have spawned a revival in methodological activity among astronomers The Statistical Challenges in Modern Astronomy V conference will bring astronomers and statisticians together to discuss methodological issues of common interest Time series analysis image analysis Bayesian methods Poisson processes nonlinear regression maximum likelihood multivariate classification and wavelet and multiscale analyses are all important themes to be covered in detail Many problems will be introduced at the conference in the context of large scale astronomical projects including LIGO AXAF XTE Hipparcos and digitized sky surveys

Statistical Challenges in Modern Astronomy Eric D. Feigelson, G. Jogesh Babu, 2012-12-06 Modern astronomy has been characterized by an enormous growth in data acquisition from new technologies in telescopes detectors and computation One can now compile catalogs of tens or hundreds of millions of stars or galaxies and databases from satellite based observations are reaching terabit proportions This wealth of data gives rise to statistical challenges not previously encountered in astronomy This book is the result of a workshop held at Pennsylvania State University in August 1991 that brought together leading astronomers and statisticians to consider statistical challenges encountered in modern astronomical research The chapters have all been thoroughly revised in the light of the discussions at the conference and some of the lively discussion is recorded here as well

Statistical Challenges in Modern Astronomy II G. Jogesh Babu, Eric D. Feigelson, 2012-12-06 Modern astronomical research faces a vast range of statistical issues which have spawned a revival in methodological activity among astronomers The Statistical Challenges in Modern Astronomy II conference held in June 1996 at the Pennsylvania State University five years after the first conference brought astronomers and statisticians together to discuss methodological issues of common interest Time series analysis image analysis Bayesian methods Poisson processes nonlinear regression maximum likelihood multivariate classification and wavelet and multiscale analyses were important themes Astronomers frequently encounter troublesome situations such as heteroscedastic weighting of data unevenly spaced time series and selection effects leading to censoring and truncation Many problems were introduced at the conference in the context of large scale astronomical projects including LIGO AXAF XTE Hipparcos and digitized sky surveys This volume will be of interest to researchers and advanced students in both fields astronomers who seek exposure to recent developments in statistics and statisticians interested in confronting new problems It is edited by two faculty members of the Pennsylvania State University who have a long standing cross disciplinary collaboration and jointly authored the recent introductory monograph *Astrostatistics* G J Babu is Professor of Statistics Fellow of the Institute of Mathematical Statistics and Associate Editor of the *Journal of Statistical Planning Inference* and the *Journal of*

Selected Works of Peter J. Bickel Jianqing Fan, Ya'acov Ritov, C.F. Jeff Wu, 2012-11-28 This volume presents selections of Peter J Bickel s major papers along with comments on their novelty and impact on the subsequent development of statistics as a discipline Each of the eight parts concerns a particular area of research and provides new commentary by experts in the area The parts range from Rank Based Nonparametrics to Function Estimation and Bootstrap Resampling Peter s amazing career encompasses the majority of statistical developments in the last half century or about about half of the entire history of the systematic development of statistics This volume shares insights on these exciting statistical developments with future generations of statisticians The compilation of supporting material about Peter s life and work help readers understand the environment under which his research was conducted The material will also inspire readers in their own research based pursuits This volume includes new photos of Peter Bickel his biography publication list and a list of his students These give the reader a more complete picture of Peter Bickel as a teacher a friend a colleague and a family man

New Horizons from Multi-Wavelength Sky Surveys Brian J. McLean, Daniel A. Golombek, Jeffrey J.E. Hayes, Harry E. Payne, 2012-12-06 Large area sky surveys are now a reality in the radio IR optical and X ray passbands In the next few years new surveys using optical UV and IR mosaic cameras with high throughput digital detectors will expand the dynamic range and accuracy of photometry and astrometry of objects over a significant fraction of the entire sky Parallel X ray and radio surveys over the same areas will produce astronomical image and spectroscopic databases of unprecedented size and quality The combined data sets will provide significant new constraints on star formation stellar dynamics Galactic structure the evolution of galaxies and large scale structure as well as new opportunities to identify rare objects in the solar system and the Galaxy Large area surveys have formidable data acquisition processing archiving and data distribution demands and this meeting provided a forum for sharing experiences amongst workers specializing in different wavebands as well as discussing how multiband observations can reveal

fundamental relationships in our understanding of the Universe

Astronomical Time Series Dan Maoz, Amiel Sternberg, Elia M. Leibowitz, 2013-06-29 ELIA M LEIBOWITZ Director Wise Observatory Chair Scientific Organizing Committee The international symposium on Astronomical Time Series was held at the Tel Aviv University campus in Tel Aviv from December 30 1996 to January 11 1997 It was organized in order to celebrate the 25th anniversary of the Florence and George Wise Observatory WO operated by Tel Aviv University The site of the 1 meter telescope of the observatory is near the town of Mitzpe Ramon some 220 km south of Tel Aviv at the center of the Israeli Negev highland There were two major reasons for the choice of Time Series as the subject matter for our symposium One is mainly concerned with the subject matter itself and one is related particularly to the Wise Observatory There is hardly any doubt that astronomical time series are among the most ancient concepts in human civilization and culture One can even say that astronomical time series preceded astronomy itself as the impression of the day night cycle on Earth is probably the first and most fundamental effect that impress a human being or in fact most living creatures on this planet An echo of this idea can be heard in the Biblical story of Creation where the concept of night and day precedes the creation of the astronomical objects
