Statistical Inference And Prediction In Climatology A Bayesian Approach:

Statistical Inference and Prediction in Climatology E. S. Epstein, 2016-06-30 The climatologist like the hydrologist the economist the social scientist and others is frequently faces with situations in which a prediction must be made of the outcome of a process that is inherently probabilistic and this inherent uncertainty is compounded by the expert's limited knowledge of the process itself An example might be predicting next summer's mean temperature at a previously unmonitored location This monograph deals with the balanced use of expert judgment and limited data in such situations How does the expert quantify his or her judgment When data are plentiful they can tell a complete story but how does one alter prior judgment in the light of a few observations and integrate that information into a consistent and knowledgeable prediction Bayes theorem provides a straightforward rule for modifying a previously held belief in the light of new data Bayesian methods are valuable and practical This monograph is intended to introduce some concepts of statistical inference and prediction that are not generally treated in the traditional college course in statistics and have not seen their way into the technical literature generally available to the practising climatologist Even today where Bayesian methods are presented the practical aspects of their application are seldom emphasized Using examples drawn from climatology and meteorology covering probabilistic processes ranging from Bernoulli to normal to autoregression methods for quantifying beliefs as concise probability statements are described and the implications of new data on beliefs and of beliefs on predictions are developed

Statistical Methods in the Atmospheric Sciences Daniel S. Hurricanes and Climate Change James B. Elsner, Thomas H. Jagger, 2010-01-23 Recent studies suggest that tropical cyclones are more powerful than in the past with the most dramatic increase in the North Atlantic The increase is correlated with an increase in ocean

temperature A debate concerns the nature of these increases with some scientists attributing them to a natural climate fluctuation and others suggesting climate change related to anthropogenic increases in forcing from greenhouse gases A Summit on Hurricanes and Climate Change was held during the spring of 2007 on the island of Crete that brought together leading academics and researchers on both sides of the scientific debate to discuss new research and express opinions about what will happen in the future with regard to hurricane activity This proceedings volume highlights the state of the science research into various aspects of the hurricane climate connection It is likely that the science presented here will lead to new research that will help answer crucial questions about our sustainable future

Snowstorms Along the Northeastern Coast of the United States: 1955 to 1985 Paul J. Kocin, Louis Uccellini, 2016-07-29 snowstorms along the Northeastern Coast of the United States 1955 to 1985 documents 20 of the most crippling snowstorms that have affected the heavily populated coastal region of the Middle Atlantic states and southern New England over the last four decades Heavy snowfall and high winds associated with storms often referred to as nor easters can maroon millions of people at home or in transit severely disrupt human services and commerce and endanger the lives of those who venture out doors Paul J Kocin and Louis W Uccellini provide answers to questions of how these important storms develop what factors delineate snow no snow situations and what weather patterns provide clues that foretell such events The book provides a comprehensive overview of this phenomenon from historical climatological and dynamical perspectives using many illustrations maps tables and color schematics The introduction describes the major effects of such storms the complex physical interactions that fuel their development and the problems they present to forecasters trying to predict their fickle behavior and progress A review of the great northeastern storms of the past three centuries follows along with a climatology of the heavy snow events over a 30 year period Descriptions of 20 major storms supply a framework for understanding the dynamical and thermodynamical processes that contribute to heavy snowfall A summary of the physical processes that contribute to the storms concludes with issues that remain to be resolved The case study approach presents a great deal of material contained in hundreds of synoptic analyses in a well organized and useful layout allowing case by case comparisons of common features and differences Extensive tables diagrams and photographs show weather patterns at the surface and aloft emphasizing cyclone tracks and deepening rates the contributions of cold surface anticyclones cold air damming and coastal frontogenesis upper level processes jet streak circulations satellite imagery and three dimensional air flow It is hoped that this book will provide a

foundation for researchers and students interested in investigating the processes that interact to produce major winter storms The weather patterns described here provide a first step in the generation of conceptual models and also serve as an easily referenced guide for forecasters concerned with predicting heavy snowfalls along the northeastern coast of the United States
