J.

Schlegel, 2017-12-15 While there has been great progress in the development of plant breeding over the last decade the selection of suitable plants for human consumption began over 13 000 years ago Since the Neolithic era the cultivation of plants has progressed in Asia Minor Asia Europe and ancient America each specific to the locally wild plants as well as the ecological and social conditions A handy reference for knowing our past understanding the present and creating the future this book provides a comprehensive treatment of the development of crop improvement methods over the centuries It features an extensive historical treatment of development including influential individuals in the field plant cultivation in various regions techniques used in the Old World and cropping in ancient America The advances of scientific plant breeding in the twentieth century is extensively explored including efficient selection methods hybrid breeding induced polyploidy mutation research biotechnology and genetic manipulation Finally this book presents information on approaches to the sustainability of breeding and to cope with climatic changes as well as the growing world population *Optimization Under*

*Uncertainty in Sustainable Agriculture and Agrifood Industry* Víctor M. Albornoz, Alejandro Mac Cawley, Lluís M. Plà-Aragonés, 2024-03-28 This book explores optimization under uncertainty and related applications in agriculture sustainable supply chains and the agrifood industry Rapid changes in the primary sector are leading to more and more industrialized structures which require optimization methods in order to cope with today's challenges Addressing uncertainty in the agrifood industry may lead to more robust supply chain designs or to diversified risk Sustainability requires interaction with the environmental or social sciences This book bridges the gap between optimization theory uncertainty sustainability and primary sector applications mainly in the agriculture and food industry but also fisheries forestry and natural resources in general Although it has been a major challenge for the operations research community this urgently needed interdisciplinary collaboration is not adequately covered in most current curricula in applied mathematics economics or agronomic industrial forest engineering This book highlights research that can help fill this gap The individual chapters cover applications of stochastic integer linear programming and multicriteria decision methods in agriculture The topics addressed include uncertainty in areas such as the sugar cane industry pig farming and cold storage for perishable products Large scale sustainable food production is a growing concern this book offers solutions to help meet global demand in agriculture by using and improving the methods of optimization theory and operations research

**Custom-Designed Crop Breeding, 2 Volume Set** Shri Mohan Jain, Jameel M. Al-Khayri, Sudhir K. Sopory, Muneeb Ahmad Wani, 2025-11-11 Discover strategies to develop crop plants with specific traits needed to meet the specific challenges Climate change poses an existential threat to global food supplies with even modest increases in global temperature potentially spelling disaster for crop productivity Plant breeders have applied traditional methods and developed new crop varieties to maintain productivity under specific conditions but there is an urgent need to go much further We must harness the broadest possible range of genomic data and crop breeding practices to create the next generation of resilient food crops Custom Designed Crop Breeding highlights the use of omics based knowledge precision genetics and molecular techniques to breed new climate resistant crops Beginning with an overview of both present and future scenarios in which functional genomics is applied to crops it moves through crop breeding techniques design of crops for stress tolerance and more The result is an essential tool in the fight for a sustainable food supply Custom Designed Crop Breeding Volume 1 Advanced Technologies offers a comprehensive exploration of cutting edge advancements driving modern crop improvement This volume highlights innovative methodologies in genomics climate resilient breeding strategies and the transformative role of artificial intelligence AI and machine learning ML in precision agriculture Spanning diverse topics including genomic tools high throughput phenotyping bioinformatics integration and next gen AI driven predictions this book serves as an essential resource for researchers breeders and professionals seeking to revolutionize agricultural practices for sustainability and productivity Custom Designed Crop Breeding Volume 2 Improved Traits delves into innovative strategies for engineering crops with enhanced traits to address global agricultural challenges

This volume is structured around three critical themes abiotic stress tolerance biotic stress resistance and improved nutritional and pharmaceutical quality Edited by leading experts it offers a thorough exploration of advanced techniques like haplotype based breeding genomic selection and root system optimization along with the development of designer crops for resilience sustainability and functional applications Custom Designed Crop Breeding readers will also find Designer crop solutions for abiotic and biotic stresses including drought salinity insects and fungal diseases Highlights on the development of crops tailored for functional foods herbal and aromatic applications Presents the latest methodologies such as haplotype based breeding genomic selection and root architecture optimization for improved yield and resilience Custom Designed Crop Breeding is ideal for professionals and researchers interested in genetic improvements of crop plants based on innovative breeding technologies

**Cereals** Marcelo J. Carena, 2009-04-21 Agriculture depends on improved cultivars and cultivars are developed through proper plant breeding Unfortunately applied plant breeding programs that are focused on cereal commodity crops are under serious erosion because of lack of funding This loss of public support affects breeding continuity objectivity and perhaps equally important the training of future plant breeders and the utilization and improvement of plant genetic resources currently available Breeding programs should focus not only on short term research goals but also on long term genetic improvement of germplasm The research products of breeding programs are important not only for food security but also for commodity oriented public and private programs especially in the fringes of crop production Breeding strategies used for long term selection are often neglected but the reality is that long term research is needed for the success of short term products An excellent example is that genetically broad based public germplasm has significantly been utilized and recycled by industry producing billions of dollars for industry and farmers before intellectual property rights were available Successful examples of breeding continuity have served the sustainable cereal crop production that we currently have The fact that farmers rely on public and private breeding institutions for solving long term challenges should influence policy makers to reverse this trend of reduced funding Joint cooperation between industry and public institutions would be a good example to follow The objective of this volume is to increase the utilization of useful genetic resources and increase awareness of the relative value and impact of plant breeding and biotechnology That should lead to a more sustainable crop production and ultimately food security Applied plant breeding will continue to be the foundation to which molecular markers are applied Focusing useful molecular techniques on the right traits will build a strong linkage between genomics and plant breeding and lead to new and better cultivars Therefore more than ever there is a need for better communication and cooperation among scientists in the plant breeding and biotechnology areas We have an opportunity to greatly enhance agricultural production by applying the results of this research to meet the growing demands for food security and environmental conservation Ensuring strong applied plant breeding programs with successful application of molecular markers will be essential in ensuring such sustainable use of plant genetic resources
