Statistical Signal Processing: Detection, Estimation, And Time Series Analysis L.L. Scharf, *Statistical Signal Processing* Louis L. Scharf, Cédric Demeure, 1991 This book embraces the many mathematical procedures that engineers and statisticians use to draw inference from imperfect or incomplete measurements This book presents the fundamental ideas in statistical signal processing along four distinct lines mathematical and statistical preliminaries decision theory estimation theory and time series analysis

Spectral Analysis Francis Castanié, 2013-03-01 This book deals with these parametric methods first discussing those based on time series models Capon's method and its variants and then estimators based on the notions of sub spaces However the book also deals with the traditional analog methods now called non parametric methods which are still the most widely used in practical spectral analysis

Classical, Semi-classical and Quantum Noise Leon Cohen, H. Vincent Poor, Marlan O. Scully, 2011-12-21 David Middleton was a towering figure of 20th Century engineering and science and one of the founders of statistical communication theory During the second World War the young David Middleton working with Van Fleck devised the notion of the matched filter which is the most basic method used for detecting signals in noise Over the intervening six decades the contributions of Middleton have become classics This collection of essays by leading scientists engineers and colleagues of David are in his honor and reflect the wide influence that he has had on many fields Also included is the introduction by Middleton to his forthcoming book which gives a wonderful view of the field of communication its history and his own views on the field that he developed over the past 60 years Focusing on classical noise modeling and applications Classical Semi Classical and Quantum Noise includes coverage of statistical communication theory non stationary noise molecular footprints noise suppression Quantum error correction and other related topics

Ramírez, Ignacio Santamaría, Louis Scharf, 2023-01-01 This book organizes principles and methods of signal processing and machine learning into the framework of coherence The book contains a wealth of classical and modern methods of inference some reported here for the first time General results are applied to problems in communications cognitive radio passive and active radar and sonar multi sensor array processing spectrum analysis hyperspectral imaging subspace clustering and related The reader will find new results for model fitting for dimension reduction in models and ambient spaces for detection estimation and space time series analysis for subspace averaging and for uncertainty quantification Throughout the transformation invariances of statistics are clarified geometries are illuminated and null distributions are given where tractable Stochastic representations are emphasized as these are central to Monte Carlo simulations The appendices contain a comprehensive account of matrix theory the SVD the multivariate normal distribution and many of the important distributions for coherence statistics The book begins with a review of classical results in the physical and engineering sciences where coherence plays a fundamental role Then least squares theory and the theory of minimum mean squared error estimation are developed with special attention paid to statistics that may be interpreted as coherence statistics A chapter on classical hypothesis tests for covariance structure introduces the next three chapters on matched and adaptive subspace detectors These detectors are derived from likelihood reasoning but it is their geometries and invariances that qualify them as coherence statistics A chapter on independence testing in space time data sets leads to a definition of broadband coherence and contains novel applications to cognitive radio and the analysis of cyclostationarity The chapter on subspace averaging reviews basic results and derives an order fitting rule for determining the dimension of an average subspace These results are used to enumerate sources of acoustic and electromagnetic radiation and to cluster subspaces into similarity classes The chapter on performance bounds and uncertainty quantification emphasizes the geometry of the Cram r Rao bound and its related information geometry
