Gardiner, Gerald Druce, H. W. Blood-Ryan, 1888 **Machine Learning for the Physical Sciences** Carlo Requião da Cunha, 2023-12-11 Machine learning is an exciting topic with a myriad of applications. However, most textbooks are targeted towards computer science students. This, however, creates a complication for scientists across the physical sciences that also want to understand the main concepts of machine learning and look ahead to applications and advancements in their fields. This textbook bridges this gap, providing an introduction to the mathematical foundations for the main algorithms used in machine learning for those from the physical sciences without a formal background in computer science. It demonstrates how machine learning can be used to solve problems in physics and engineering, targeting senior undergraduate and graduate students in physics and electrical engineering alongside advanced researchers. They are also available on GitHub: <https://github.com/StxGuy/MachineLearning>. Key features include detailed algorithms supplemented by codes in Julia, a high-performing language and one that is easy to read for those in the natural sciences. All algorithms are presented with a good mathematical background. **Statistical Methods for Physical Science**, 1994-12-13 This volume of *Methods of Experimental Physics* provides an extensive introduction to probability and statistics in many areas of the physical sciences with an emphasis on the emerging area of spatial statistics. The scope of topics covered is wide-ranging; the text discusses a variety of the most commonly used classical methods and addresses newer methods that are applicable or potentially important. The chapter authors motivate readers with their insightful discussions. Examines basic probability including coverage of standard distributions, time series models, and Monte Carlo methods. Describes statistical methods including basic inference, goodness of fit, maximum likelihood, and least squares. Addresses time series analysis including filtering and spectral analysis. Includes simulations of physical experiments. Features applications of statistics to atmospheric physics and radio astronomy. Covers the increasingly important area of modern statistical computing.
