Learning Mathematics Prof Leone Burton, Leone Burton, 2012-10-12 Learning Mathematics brings together a collection of interrelated and forward looking chapters by internationally recognized experts that explores changes in the theories and practices of learning and teaching mathematics. The authors reject a traditional transmission view of the teaching of mathematics which has proved so ineffective for learning. In its place they offer information gathered from research and from practice about effects on the learners seeking to create and negotiate meaning. Learners are presented as actively attempting to make sense of the mathematics they encounter and learners, teachers and researchers are offered examples of how such sense making activities incorporated into mathematics classrooms impact on coming to know. The book celebrates both diversity in the range of different perspectives, contributions and topics and unity in the linking chapters and themes. It will be fascinating reading for those mathematics educators who are eager to engage with a socio-cultural perspective in order to better understand the complexity of learning mathematics.
