*VLISP A Verified Implementation of Scheme* Joshua D. Guttman, Mitchell Wand, 2012-12-06 The VLISP project showed how to produce a comprehensively verified implementation for a programming language namely Scheme 4 15 Some of the major elements in this verification were The proof was based on the Clinger Rees denotational semantics of Scheme given in 15 Our goal was to produce a warts and all verification of a real language With very few exceptions we constrained ourselves to use the semantic specification as published The verification was intended to be rigorous but not completely formal much in the style of ordinary mathematical discourse Our goal was to verify the algorithms and data types used in the implementation not their embodiment in code See Section 2 for a more complete discussion of these issues Our decision to be faithful to the published semantic specification led to the most difficult portions of the proofs these are discussed in 13 Section 2 3 2 4 Our implementation was based on the Scheme48 implementation of Kelsey and Rees 17 This implementation translates Scheme into an intermediate level byte code language which is interpreted by a virtual machine The virtual machine is written in a subset of Scheme called PreScheme The implementation is sufficiently complete and efficient to allow it to bootstrap itself We believe that this is the first verified language implementation with these properties **Verified**

Wing, Jim Woodcock, Jim Davies, 2003-07-31 Formal methods are coming of age Mathematical techniques and tools are now regarded as an important part of the development process in a wide range of industrial and governmental organisations A transfer of technology into the mainstream of systems

development is slowly but surely taking place FM 99 the First World Congress on Formal Methods in the Development of Computing Systems is a result and a measure of this new found maturity It brings an impressive array of industrial and applications oriented papers that show how formal methods have been used to tackle real problems These proceedings are a record of the technical symposium of FM 99 also the papers describing applications of formal methods you will find technical reports papers and abstracts detailing new advances in formal techniques from mathematical foundations to practical tools The World Congress is the successor to the four Formal Methods Europe Symposia which in turn succeeded the four VDM Europe Symposia This session reflects an increasing openness within the international community of researchers and practitioners papers were submitted covering a wide variety of formal methods and application areas The programme committee reflects the Congress's international nature with a membership of 84 leading researchers from 38 different countries The committee was divided into 19 tracks each with its own chair to oversee the reviewing process Our collective task was a difficult one there were 259 high quality submissions from 35 different countries

*Lectures on Petri Nets II: Applications* Wolfgang Reisig, Grzegorz Rozenberg, 1998-11-04 The two volume set originates from the Advanced Course on Petri Nets held in Dagstuhl Germany in September 1996 beyond the lectures given there additional chapters have been commissioned to give a well balanced presentation of the state of the art in the area Together with its companion volume *Lectures on Petri Nets I Basic Models* this book is the actual reference for the area and addresses professionals students lecturers and researchers who are interested in systems design and would like to learn to use Petri nets familiar with subareas of the theory or its applications and wish to view the whole area interested in learning about recent results presented within a unified framework planning to apply Petri nets in practical situations interested in the relationship of Petri nets to other models of concurrent systems

**Compilation and Equivalence of Imperative Objects** Andrew D. Gordon,Paul D. Hankin,Søren B. Lassen,1997 Abstract We adopt the untyped imperative object calculus of Abadi and Cardelli as a minimal setting in which to study problems of compilation and program equivalence that arise when compiling object oriented languages We present both a big step and a small step substitution based operational semantics for the calculus and prove them equivalent to the closure based operational semantics given by Abadi and Cardelli Our first result is a direct proof of the correctness of compilation to a stack based abstract machine via a small step decompilation algorithm Our second result is that contextual equivalence of objects coincides with a form of Mason and Talcott s CIU equivalence the latter provides a tractable means of establishing operational equivalences Finally we prove correct an algorithm used in our prototype compiler for statically resolving method offsets This is the first study of correctness of an object oriented abstract machine and of operational equivalence for the

imperative object calculus
