Srinivasan, 2000-05-15 *From White Dwarfs to Black Holes* chronicles the extraordinarily productive scientific career of Subrahmanyan Chandrasekhar one of the twentieth century s most distinguished astrophysicists Among Chandrasekhar s many discoveries were the critical mass that makes a star too massive to become a white dwarf and the mathematical theory of black holes In 1983 he shared the Nobel Prize for Physics for these and other achievements Over the course of more than six decades of active research Chandrasekhar investigated a dizzying array of subjects G Srinivasan notes in the preface to this book that the range of Chandra s contributions is so vast that no one person in the physics or astronomy community can undertake the task of commenting on his achievements Thus in this collection ten eminent scientists evaluate Chandrasekhar s contributions to their own fields of specialization Donald E Osterbrock closes the volume with a historical discussion of Chandrasekhar s interactions with graduate students during his more than quarter century at Yerkes Observatory Contributors are James Binney John L Friedman Norman R Lebovitz Donald E Osterbrock E N Parker Roger Penrose A R P Rau George B Rybicki E E Salpeter Bernard F Schutz and G Srinivasan **In Quest of the Stars and Galaxies** Theo Koupelis, 2010-01-26 Available with WebAssign Author Theo Koupelis has set the mark for a student friendly accessible introductory astronomy text with *In Quest of the Universe* He has now developed a new text to accommodate those course that focus mainly on stars and galaxies Ideal for the one term course *In Quest of the Stars and Galaxies* opens with material essential to the introductory course gravity light telescopes the sun and then moves on to focus on key material related to stars and galaxies Incorporating the rich pedagogy and vibrant art program that have made his earlier books a success Koupelis *In Quest of the Stars and Galaxies* is the clear choice for students first exploration of the cosmos **In Quest of the Universe** Theo Koupelis, 2010-02-04 Designed for the nonscience major *In Quest of the Universe* Sixth Edition is a comprehensive student friendly introduction to astronomy This accessible text guides readers through the development of historical and current astronomical theories to provide a clear account of how science works Koupelis distinct explanations acquaint students with their own solar system before moving on to the stars and distant galaxies This flexible approach allows instructors to arrange the modules to fit their own course needs With numerous interactive learning tools the Starry Night planetary software package and stunning visuals and up to date content *In Quest with the Universe* Sixth Edition is an exciting overview of this ever changing discipline **In Quest of the Universe** Karl F. Compact Objects in Astrophysics Max Camenzind, 2016-04-01 Compact objects are an important class of astronomical

objects in current research Supermassive black holes play an important role in the understanding of the formation of galaxies in the early Universe Old white dwarfs are nowadays used to calibrate the age of the Universe Mergers of neutron stars and black holes are the sources of intense gravitational waves which will be measured in the next ten years by gravitational wave detectors Camenzind's *Compact Objects in Astrophysics* gives a comprehensive introduction and up to date overview about the physical processes behind these objects covering the field from the beginning to most recent results including all relevant observations After a presentation of the taxonomy of compact objects the basic principles of general relativity are given The author then discusses in detail the physics and observations of white dwarfs and neutron stars including the most recent equations of state for neutron star matter the gravitational field of rapidly rotating compact objects rotating black holes including ray tracing and black hole magnetospheres gravitational waves and the new understanding of accretion processes by means of the magnetorotational instability of accretion disks This modern treatise of compact object astrophysics uses the 3+1 split approach to Einstein's equations and to relativistic hydrodynamics and magnetohydrodynamics In each chapter problems and solutions help deepen the understanding of the subject Both advanced students and researchers will appreciate this book as an advanced textbook and reference on this fascinating field of astrophysics
