K. Ching, Ian M. Shapiro, 2020-11-19 FULLY ILLUSTRATED UPDATED GUIDE TO THE STRATEGIC DESIGN OF GREEN BUILDINGS In the tradition of Building Construction Illustrated Francis D K Ching and Ian M Shapiro offer a fully illustrated guide to the theory

and practice of sustainable design This guide provides architects designers and builders in the green design professional community a framework and detailed strategies for designing substantively green buildings With a focus on sustainable sites approaching and reaching net zero energy low and zero water usage minimum impact materials and superior indoor environmental quality this guide explains why we need to build green as well as green building theory and advancements in the industry This Second Edition includes All new case studies featuring geographically diverse buildings with proven zero energy performance Expanded coverage of zero energy building design as well as zero water and zero waste buildings Practical guidance for the schematic design of high performance buildings heating and hot water system selection building envelope details and integrating renewable energy Advanced strategies such as the concept of shape efficiency and the optimal location for stairwells in buildings Additional strategies for affordability in green design and construction Updated references to the latest codes and standards This Second Edition of Green Building Illustrated is an excellent resource for professionals students and those interested in the design and construction of sustainable buildings

Building Codes and Regulations: Navigating Compliance in Building Services Charles Nehme, Building codes and regulations form the backbone of modern building services ensuring that structures are safe efficient and sustainable As the complexity of buildings increases so too does the web of standards that govern their design construction and operation For professionals in the fields of HVAC electrical and plumbing services navigating this landscape is critical not only to ensure compliance but also to deliver systems that promote safety comfort and energy efficiency In my career spanning over 30 years I have witnessed firsthand the evolving nature of building codes and the challenges they present to engineers contractors and facility managers alike What once seemed like a straightforward process has transformed into a sophisticated practice requiring deep knowledge of not only local regulations but also international standards and best practices This book Building Codes and Regulations Navigating Compliance in Building Services is born out of my experience in the HVAC and construction industries It is designed to provide a comprehensive overview of the critical codes and regulations that shape the field of building services specifically focusing on HVAC electrical and plumbing systems My goal is to demystify these codes and present them in a way that is both accessible and practical for professionals at all levels Throughout this book you will find detailed discussions on key standards including the International Building Code IBC National Electrical Code NEC and standards from bodies like ASHRAE and NFPA We will explore how these regulations intersect with energy efficiency initiatives fire safety and accessibility requirements among others More importantly I aim to provide insights into the approval process inspection requirements and best practices to help you avoid common pitfalls In addition to regulatory knowledge this book emphasizes the importance of staying informed in an ever changing industry New technologies climate change considerations and the push for sustainability are all shaping the future of building services and understanding how these trends impact building codes will be key to remaining competitive and compliant in the years ahead It is my hope that

this book will serve as a valuable resource for engineers architects contractors and anyone involved in the design construction or maintenance of building systems Whether you are navigating codes for the first time or seeking to deepen your expertise the insights provided here will guide you in creating systems that meet today s stringent requirements while preparing for tomorrow s innovations Thank you for embarking on this journey with me Sincerely Charles Nehme *Green Building Challenge '98* ,1999 *Research Anthology on Environmental and Societal Well-Being Considerations in Buildings and Architecture* Management Association, Information Resources,2021-05-28 When it comes to architecture there has been a focus on sustainable buildings and human well being in the built environment Buildings should not only be environmentally friendly and sustainable but dually focused on human health wellness and experience This includes considerations into the quality of buildings ranging from ventilation to thermal comfort along with environment considerations such as energy usage and material selection Specific architectural choices and design for buildings can either contribute to or negatively impact both society and the environment leading research in the field of architecture to be focused on environmental and societal well being in accordance with the built environment The *Research Anthology on Environmental and Societal Well Being Considerations in Buildings and Architecture* focuses on how the built environment is being constructed to purposefully enhance societal well being while also maintaining green standards for environmental sustainability On one side this book focuses on the specific building choices that can be made for the purpose of human well being and the occupants who will utilize the building On the other side this book also focuses on environmental sustainability from the standpoint of green buildings and environmental concerns Together these topics allow this book to have a holistic view of modern architectural choices and design This book is essential for architects IT professionals engineers contractors environmentalists interior designers civil planners regional government officials construction companies policymakers practitioners researchers academicians and students interested in architecture and how it can promote environmental and societal well being
