Craig,Massachusetts Institute of Technology. Engineering Systems Division,2012 In the near term efficiency improvements represent a key option for reducing the impacts of climate change The growing awareness of climate change has increased the attention regarding the carbon emissions embedded in the products we consume This increased attention creates a need to measure and improve the carbon efficiency of the supply chains that produce those goods In this thesis we present a method for measuring the carbon efficiency of a supply chain that recognizes the decentralized nature of supply chains First drawing from concepts in supply chain performance measurement and eco efficiency we propose a definition of supply chain carbon efficiency that is consistent with the idea of a product s carbon footprint We present Life Cycle Assessment LCA a method for quantifying the environmental impact of a product or service as the appropriate method of measuring a product s carbon footprint and demonstrate the use of LCA through a case study involving the supply chain of bananas Next we characterize the difficulty and uncertainty in

performing an LCA of a supply chain through an analysis of our case study of bananas We present a framework to reduce the uncertainty through the concept of a carbon label The carbon label provides a system where firms can measure the carbon footprint of their activities and share this information with their supply chain partners We identify the role of third parties in facilitating information sharing and define the characteristics that describe the carbon label Finally we demonstrate how the carbon label works in the context of the supply chain Through an analysis of the mode and carrier assignment steps in an integrated supply chain we develop new metrics that show how sharing information can increase the accuracy of the measured carbon footprint and improve decision making We provide incentive for firms to share information through the development of a vertical differentiation model of product carbon labels Our model shows how consumer demand for lower carbon products drives reductions in the carbon footprint throughout the supply chain and induces firms to voluntarily disclose their carbon footprint
