## Hybrid Work Planner:

**Planning Better Cities** Halvard Dalheim,2023-10-07 This textbook provides an accessible practical guide to the strategic planning process required for the preparation of city plans from entire metropolitan areas to town centres It fills a gap in the academic literature on the topic of strategic planning Its conceptual and practical content together with a student friendly style and high use of practical examples make it accessible to both the student and recent graduate Its presentation in three parts allows the reader or course leader to access those sections relevant to either their learning requirements or day to day work activities The book is clearly structured into three parts and provides flexibility in approach and learning for students taking relevant planning courses The extensive reading list at the conclusion of each chapter provides the student with an opportunity to explore in more detail the individual topics The practical approach equips the recent graduate with a deeper understanding of the purpose of each element of strategic planning from how to prepare a research brief to how to approach community engagement activities

*Motion planning and feedback control techniques with applications to long tractor-trailer vehicles* Oskar Ljungqvist,2020-04-20 During the last decades improved sensor and hardware technologies as well as new methods and algorithms have made self driving vehicles a realistic possibility in the near future At the same time there has been a growing demand within the transportation sector to increase efficiency and to reduce the environmental impact related to transportation of people and goods Therefore many leading automotive and technology companies have turned their attention towards developing advanced driver assistance systems and self driving vehicles Autonomous vehicles are expected to have their first big impact in closed environments such as mines harbors loading and offloading sites In such areas the legal requirements are less restrictive and the surrounding environment is more controlled and predictable compared to urban areas Expected positive outcomes include increased productivity and safety reduced emissions and the possibility to relieve the human from performing complex or dangerous tasks Within these sites tractor trailer vehicles are frequently used for transportation These vehicles are composed of several interconnected vehicle segments and are therefore large complex and unstable while reversing This thesis addresses the problem of designing efficient motion planning and feedback control techniques for such systems The contributions of this thesis are within the area of motion planning and feedback control for long tractor trailer combinations operating at low speeds in closed and unstructured environments It includes development of motion planning and feedback control frameworks structured design tools for guaranteeing closed loop stability and experimental validation of the proposed solutions through simulations lab and field experiments Even though the primary application in this work is tractor trailer vehicles many of the proposed approaches can with some adjustments also be used for other systems such as drones and ships The developed sampling based motion planning algorithms are based upon the probabilistic closed loop rapidly exploring random tree CL RRT algorithm and the deterministic lattice based motion planning algorithm It is also proposed to use numerical optimal control offline for

precomputing libraries of optimized maneuvers as well as during online planning in the form of a warm started optimization step To follow the motion plan several predictive path following control approaches are proposed with different computational complexity and performance Common for these approaches are that they use a path following error model of the vehicle for future predictions and are tailored to operate in series with a motion planner that computes feasible paths The design strategies for the path following approaches include linear quadratic LQ control and several advanced model predictive control MPC techniques to account for physical and sensing limitations To strengthen the practical value of the developed techniques several of the proposed approaches have been implemented and successfully demonstrated in field experiments on a full scale test platform To estimate the vehicle states needed for control a novel nonlinear observer is evaluated on the full scale test vehicle It is designed to only utilize information from sensors that are mounted on the tractor making the system independent of any sensor mounted on the trailer Under de senaste årtiondena har utvecklingen av sensor och hrdvaruteknik gått i en snabb takt samtidigt som nya metoder och algoritmer har introducerats Samtidigt ställs det stora krav på transportsektorn att öka effektiviteten och minska miljöpåverkan vid transporter av både människor och varor Som en följd av detta har många ledande fordonstillverkare och tekniska företag satsat på att utveckla avancerade fjärrstyrda system och självkörande fordon Vår forskning inom autonoma fordon har under de senaste årtiondena kraftigt ökat Den tekniska problemställningen är att låsa fria fordon förväntas lösa stora miljöproblem som gruvor hamnar lastnings och lossningsplatser I sådana områden är lagstiftningen mindre utvecklad jämfört med stadsområden och omgivningen är mer kontrollerad och förutsägbar När det gäller de förväntade positiva effekterna är ökad produktivitet och säkerhet minskade utsläpp och möjligheten att avlasta människor från att utföra svåra eller farliga uppgifter Inom dessa platser används ofta lastbilar med olika släpvagnskombinationer för att transportera material En sådan fordonskombination är uppbyggd av flera ihopkopplade moduler och rullas utmanövrerande att backa d systemet är instabilt Detta gör det svårt att utforma ramverk för att styra sådana system vid exempelvis autonom backning Självkörande fordon är mycket komplexa system som består av en rad olika komponenter vilka är designade för att lösas separata delproblem Två viktiga komponenter i ett självkörande fordon är dels rullplaneraren som har i uppgift att planera hur fordonet ska röra sig för att på ett säkert sätt nå ett förordnat mål och dels den banföljande regulatorn vars uppgift är att se till att den planerade manövern faktiskt utförs i praktiken trots störningar och modellfel I denna avhandling presenteras flera olika algoritmer för att planera och utföra komplexa manövrer för lastbilar med olika typer av släpvagnskombinationer De presenterade algoritmerna är avsedda att användas som avancerade fjärrstyrda system eller som komponenter i ett helt autonomt system Vår primära applikationen i denna avhandling är lastbilar med släpvagn kan många av de förslagna algoritmerna även användas för en rad andra system såsom drönare och bilar Experimentell validering är viktigt för att motivera att en förslagen algoritm är användbar i praktiken I denna avhandling har flera av de förslagna planerings och reglerstrategierna implementerats på en småskalig testplattform och utvärderats i en kontrollerad labbmiljö Utöver detta har även

flera av de flesta ramverken implementerats och utvärderats i fältexperiment på en fullskalig test plattform som har utvecklats i samarbete med Scania CV Hållbara utvärderas även en ny metod för att skatta släpvagnens beteende genom att endast utnyttja information från sensorer monterade på lastbilen vilket gör det flesta ramverket oberoende av sensorer monterade på släpvagnen

Making Sense of Planning and Development for the Post-Pandemic Cities Kh Md Nahiduzzaman, 2024-09-08 This book holds a distinguished promise of an intellectual understanding and complete account of that shifts in laying out resilient planning development and policy landscapes for the cities to come The approach offers a unique perspective on planning and development in the post pandemic era addressing the interconnectedness of diverse spatial social cultural economic demographic and political aspects It provides insights into the transformational behavior of cities and citizens explores the influence of remote work on the real estate market emphasizes the need for resilient infrastructure and adaptive planning and reinforces the association between health infrastructure and planning for resilient cities The book provides a comprehensive account of the shifts and challenges faced in planning and development due to climate change and the COVID 19 pandemic It explores transformational urban planning sociocultural and economic landscapes and addresses topics including land use changes transformational real estate market urban recreational space adaptive infrastructure and the need for resilient planning It offers valuable insights for urban designers architects geographers city planners policymakers and public officials seeking to enhance city resilience in the post pandemic era The intended readership of the book includes urban designers architects city planners geographers policy makers and public officials It caters to individuals interested in gaining a critical understanding of the interconnectedness between various spatial social cultural economic demographic and political aspects The content level is academic offering scholarly insights and a unique post pandemic perspective on enhancing city resilience

**Robot Path Planning and Cooperation** Anis Koubaa, Hachemi Bennaceur, Imen Chaari, Sahar Trigui, Adel Ammar, Mohamed-Foued Sriti, Maram Alajlan, Omar Cheikhrouhou, Yasir Javed, 2018-04-05 This book presents extensive research on two main problems in robotics the path planning problem and the multi robot task allocation problem It is the first book to provide a comprehensive solution for using these techniques in large scale environments containing randomly scattered obstacles The research conducted resulted in tangible results both in theory and in practice For path planning new algorithms for large scale problems are devised and implemented and integrated into the Robot Operating System ROS The book also discusses the parallelism advantage of cloud computing techniques to solve the path planning problem and for multi robot task allocation it addresses the task assignment problem and the multiple traveling salesman

problem for mobile robots applications In addition four new algorithms have been devised to investigate the cooperation issues with extensive simulations and comparative performance evaluation The algorithms are implemented and simulated in MATLAB and Webots

**Fundamentals of Capturing and Processing Drone Imagery and Data** Amy Frazier,Kunwar Singh,2021-07-27 Unmanned aircraft systems UAS are rapidly emerging as flexible platforms for capturing imagery and other data across the sciences Many colleges and universities are developing courses on UAS based data acquisition Fundamentals of Capturing and Processing Drone Imagery and Data is a comprehensive introductory text on how to use unmanned aircraft systems for data capture and analysis It provides best practices for planning data capture missions and hands on learning modules geared toward UAS data collection processing and applications FEATURES Lays out a step by step approach to identify relevant tools and methods for UAS data image acquisition and processing Provides practical hands on knowledge with visual interpretation well organized and designed for a typical 16 week UAS course offered on college and university campuses Suitable for all levels of readers and does not require prior knowledge of UAS remote sensing digital image processing or geospatial analytics Includes real world environmental applications along with data interpretations and software used exercises in chapters 8 through 19 have support materials for free download Combines the expertise of a wide range of UAS researchers and practitioners across the geospatial sciences This book provides a general introduction to drones along with a series of hands on exercises that students and researchers can engage with to learn to integrate drone data into real world applications No prior background in remote sensing GIS or drone knowledge is needed to use this book Readers will learn to process different types of UAS imagery for applications such as precision agriculture forestry urban landscapes and apply this knowledge in environmental monitoring and land use studies

**Knowledge-Based Process Planning for Construction and Manufacturing** Carlos Zozaya-Gorostiza,2012-12-02 Knowledge Based Process Planning for Construction and Manufacturing describes a knowledge based system architecture that is used to develop process planning systems called PLANEX This book explains that PLANEX is a domain independent knowledge based process planning system architecture Starting from a description of the physical artifact to be constructed or manufactured PLANEX generates the set of activities used to create the artifact These activities with their required resources are linked into a process planning network which can be used in project scheduling or management This text also reviews the concepts requirements and resulting architecture of PLANEX including detailed descriptions of applications of the system in construction and manufacturing This publication is recommended to engineers architects and specialists interested in construction and manufacturing process planning
