Circular Economy: Recent Trends in Global Perspective Sadhan Kumar Ghosh, Sannidhya Kumar Ghosh, 2021-11-23 This book presents the advantages of the circular economy as a powerful and inevitable model for tackling the current challenges against shrinking resources and establishing the resource efficient economy. The experienced contributors present the status and strategies of circular economy implementation in several countries with hands on experience to protect the environment while promoting the circular economy through legislative requirements, best practices adopted and popularizing the idea of circulation of resources amongst the researchers, academia, policy makers, industry and the general public at large. The book advocates a model that consists of designing products and processes with a view to endlessly recycling them, evolving a greater scope of sustainable development.

Green Circular Economy Pardeep Singh, Anamika Yadav, Indranil Chowdhury, Ravindra Pratap Singh, 2023-10-12 This book highlights the concepts, issues and policies related to the circular economy. The chapters of this book are designed to include the theoretical approach to the green circular economy, sustainable supply chain and challenges in the green circular economy. The book is a step towards designing sustainable circular economy embedded production and management practices. This book also addresses the capability of green lean productions and a circular economy to improve resource efficiency and address environmental sustainability issues. Environmental sustainability is a hot topic in politics, science and industry. There is a need to achieve economic, social and environmental sustainability goals through adaptations of the green circular economy which can help minimize greenhouse gas emissions, toxic pollutant releases, waste and energy and resource usage by employing renewable energy concepts and recyclable materials. The production processes must be resource efficient and environmentally friendly, including green lean manufacturing. Adopting a circular economy in manufacturing is less evident than green lean management. However, systematic strategies to bridge this gap have yet to be devised. There is an urgent need to fully explore the Circular Economy concept to attain resource and environmental goals for the sustainability of the environment in the present era of global climate change. Its framework's powerful strategies need to solve the problem created by linear economic growth through industrialization and gross economic growth. There is a need to improve the sustainability management capabilities in the manufacturing and industrial sector to support the circular economy and a need to examine the impact of green human resource management. This book proposes the combined approach of green lean solutions and a green circular economy. Through this book, we try to produce the content and information in a compiled form to give the audience an understanding of the circular economy concept, framework and challenges.

Circular Economy and Sustainable Development
Alexandros I. Stefanakis, Ioannis E. Nikolaou, 2024-10-22 This book will highlight the role of CE in the sustainability field as it is expressed in the various fields and disciplines and its contribution to building a sustainable society by providing a better understanding of the relevant social and cultural structures and the need for cross-disciplinary knowledge and diverse skills.

Such an integrated approach which combines the concept of sustainability in the engineering field to create a CE has not yet been presented in detail in the published literature and there are only scattered studies covering only small parts of this holistic approach Hence this book will represent a single reference that will provide summarized information and state of the art knowledge on this topic of the future The book will include chapters showcasing investigating the relation between circular economy principles and their realization in different engineering fields This includes theoretical justification research studies and full scale case studies The approach focuses on two distinct levels macro and micro on both production and consumption sides

Circular Economy and Sustainability Alexandros Stefanakis, Ioannis Nikolaou, 2021-09-14 The concept of circular economy is based on strategies practices policies and technologies to achieve principles related to reusing recycling redesigning repurposing remanufacturing refurbishing and recovering water waste materials and nutrients to preserve natural resources It provides the necessary conditions to encourage economic and social actors to adopt strategies toward sustainability However the increasing complexity of sustainability aspects means that traditional engineering and management economics alone cannot face the new challenges and reach the appropriate solutions Thus this book highlights the role of engineering and management in building a sustainable society by developing a circular economy that establishes and protects strong social and cultural structures based on cross disciplinary knowledge and diverse skills It includes theoretical justification research studies and case studies to provide researchers practitioners professionals and policymakers the appropriate context to work together in promoting sustainability and circular economy thinking Volume 1 Circular Economy and Sustainability Management and Policy discusses the content of circular economy principles and how they can be realized in the fields of economy management and policy It gives an outline of the current status and perception of circular economy at the micro meso and macro levels to provide a better understanding of its role in achieving sustainability Volume 2 Circular Economy and Sustainability Environmental Engineering presents various technological and developmental tools that emphasize the implementation of these principles in practice micro level It demonstrates the necessity to establish a fundamental connection between sustainable engineering and circular economy Presents a novel approach linking circular economy concepts to environmental engineering and management to promote sustainability goals in modern societies Approaches the topic on production and consumption at both the micro and macro levels integrating principles with practice Offers a range of theoretical and foundational knowledge in addition to case studies that demonstrate the potential impact of circular economy principles on both economic and societal progress

The Contribution of Life Cycle Analyses and Circular Economy to the Sustainable Development Goals Luciana Brandli, Francisco Dalla Rosa, Rudi Petrorius, Lucas Veiga Avila, Walter Leal Filho, 2025-07-01 This book offers a comprehensive review of life cycle assessment LCA circular economy CE and sustainable development exploring their achievements and progress across the world The book also emphasizes the significant contribution of LCA and CE to

achieving the Sustainable Development Goals (SDGs) demonstrating how these frameworks can drive progress toward global sustainability targets. The main topics covered include the environmental and economic assessment of building materials, the life cycle of agricultural and bio-based products, the role of venture businesses in promoting CE, and the impact of CE on sustainable development. Additionally, the book discusses energy optimization in supply chains, the nexus between comparative advantage and the bio-based economy, and the use of CE frameworks in energy management for educational institutions. Key chapters highlight the valorization of waste materials for bioethanol production, the evolution of LCA studies on electric vehicle batteries, and the implementation of EDGE certification in Brazilian public schools. The book also explores the integration of LCA and CE in architectural education, the challenges and barriers to CE adoption in Nigeria, and the role of public policy in advancing CE in Brazil. These topics are critically important as they address the pressing need for sustainable practices in various industries. The integration of LCA and CE principles is crucial for minimizing environmental impacts, optimizing resource use, and fostering innovation in sustainable development. The book aims to solve the problem of how to effectively incorporate these principles into practice, providing methodological approaches, case studies, and policy perspectives that illustrate successful implementations and identify areas for improvement. The target audience for this book includes researchers, policymakers, industry professionals, and students interested in sustainability, environmental science, and circular economy practices. By offering in-depth analysis and practical insights, this book serves as a valuable resource for anyone seeking to understand and apply LCA and CE principles to achieve sustainable development goals.

New Frontiers of Construction Management Marco Alvise Bragadin, Kalle Kähkönen, Emlyn Witt, 2025-06-02. This book comprises the select proceedings of the 3rd Construction Management Workshop (CMW 24) New Frontiers of Construction Management held in Ravenna, Italy, on November 7-8, 2024. It highlights key research topics that could be drivers of change and innovation in the management of the construction and building processes in its various stages, including design, construction, operation, and maintenance, disposal, and reuse. It represents a contribution to the debate and an introduction to new methods and tools addressing building production and management. The contributions focus on the use of methodologies for Construction Project Management, especially those that have witnessed recent developments because of the digitalization of building processes, the use of Artificial Intelligence, and the search for environmental sustainability. Topics include AI and Digitalization of building processes, Building Information Modelling, and Built Heritage, Construction Project Management, and Lean Construction, Off-site Construction, Occupational Health and Safety management, Environmental impacts, Circular Economy, Low-carbon Life Cycle Assessment in construction projects.
