Gower Handbook of People in Project Management Lindsay Scott,2016-04-22 Modern projects are all about one group of people delivering benefits to others so it s no surprise that the human element is fundamental to project management The Gower Handbook of People in Project Management is a complete guide to the human dimensions involved in projects The book is a unique and rich compilation of over 60 chapters about project management roles and the people who sponsor manage deliver work in or are otherwise important to project success It looks at the people issues that are specific to different sectors of organization public private

and third sector the organization of people in projects both real and virtual the relationship between people their roles and the project environment and the human behaviours and skills associated with working collaboratively Thus this comprehensive and innovative handbook discusses all the important topics associated with employing developing and managing people for successful projects The contributors have been drawn from around the world and include experts ranging from practising managers to academics and advanced researchers The Handbook is divided into six parts which begin with management and project organization and progress through to more advanced and emerging practices It benefits hugely from Lindsay Scott s expert knowledge and experience in this field and from Dennis Lock s contributions and meticulous editing to ensure that the text and illustrations are always lucid and informative **Daily Graphic** Ransford Tetteh,2010-04-19 Project Management Harold Kerzner,1992 This widely acclaimed classic reference has been completely revised and reorganized providing readers at all levels of experience with an authoritative up to date source that s easier than ever to see New to this edition are updates to all chapters Newly released Project Management Institute Body of Knowledge updates throughout Project Planning as Key to Success in Project Management Stefanie Vater,2012-05-24 Bachelor Thesis from the year 2012 in the subject Business economics Business Management Corporate Governance grade 1 1 University of applied sciences D sseldorf language English abstract A CEO is presenting the annual report in front of 20 000 employees when suddenly the projector breaks down A key account manager cannot pay the restaurant bill for his top client as he has lost his wallet A newly elected mayor misses his first public speech as he is being held up in a traffic jam All these examples taken from daily business and their negative effects such as the loss of time a damaged reputation and higher costs could have been avoided with an appropriate planning beforehand Projects are even more critical as they are by definition unique Although this idea seems to be consistent and companies should therefore strive to complete their projects successfully only 32 % of all projects succeed in terms of compliance with time budget and specifications 44 % are completed late exceeding budget showing a deficit in features or with a combination thereof The remaining 24 % of all projects fail i e they are cancelled before completion or are finished but never used Going back to the year 2000 this failure rate has never been higher A reason for this may be that the unique nature of projects also implies uncertainties the more aspects of a project are unique the higher are the entailed uncertainties and the higher is the risk to fail And projects are becoming more and more demanding with an increasing pressure on companies in terms of time budget and quality As globalisation is rising the need for fast and comprehensive adjustments of processes systems and products is increasing simultaneously To be able to bear the growing competitive pressure companies need fast innovative and interdisciplinary solutions which they achieve best by applying projects But projects lacking clear targets specifications communication channels schedules and budgets are likely to fail Hence an appropriate project planning is vital to avoid or at least minimise all uncertainties and risks that could lead to a full or partial failure of the project But project planning itself does not

guarantee success It must be executed in a way that is comprehensive and efficient at the same time Finding out which planning processes are required and to which detail is crucial for performing a completely successful project
