Statistical Analysis Of Social Data:

Statistical Analysis of Social Data Richard A. Zeller, Edward G. Carmines, 1978-01-01 **Statistics for Social Data Analysis** David Knoke, George W. Bohrnstedt, Alisa Potter Mee, 2002 The fourth edition of STATISTICS FOR SOCIAL DATA ANALYSIS continues to show students how to apply statistical methods to answer research questions in various fields Throughout the text the authors underscore the importance of formulating substantive hypotheses before attempting to analyze quantitative data An important aspect of this text is its realistic hands on approach Actual datasets are used in most examples helping students understand and appreciate what goes into the research process The book focuses on the continuous discrete distinction in considering the level at which a variable is measured Rather than dwelling on the four conventional levels of measurement distinctions the authors discuss statistics for analyzing continuous and discrete variables separately and in combination **Instructor's Manual [for] Statistical Analysis of Social Data** Richard A.

statistical concepts and R code Comes with instructor materials upon request including sample syllabi lecture slides and additional replication style exercises with solutions and with the real world datasets analyzed Looking for a more advanced introduction Consider Quantitative Social Science by Kosuke Imai In addition to covering the material in Data Analysis for Social Science it teaches diff in diff models heterogeneous effects text analysis and regression discontinuity designs among other things Statistics and Data Interpretation for Social Work James A. Hanneman, Augustine J. Kposowa, Mark D. Riddle,2012-12-04 A core statistics text that emphasizes logical inquiry not math Basic Statistics for Social Research teaches core general statistical concepts and methods that all social science majors must master to understand and do social research Its use of mathematics and theory are deliberately limited as the authors focus on the use of concepts and tools of statistics in the analysis of social science data rather than on the mathematical and computational aspects Research questions and applications are taken from a wide variety of subfields in sociology and each chapter is organized around one or more general ideas that are explained at its beginning and then applied in increasing detail in the body of the text Each chapter contains instructive features to aid students in understanding and mastering the various statistical approaches presented in the book including Learning objectives Check quizzes after many sections and an answer key at the end of the chapter Summary Key terms End of chapter exercises SPSS exercises in select chapters Ancillary materials for both the student and the instructor are available and include a test bank for instructors and downloadable video tutorials for students **Statistics and Data Analysis for Social Science** Eric J. Statistical Analysis for the Social Sciences Norman R. Kurtz, 1998-09

Theory-Based Data Analysis for the Social Sciences Carol S. Aneshensel, 2012-12-11 This book presents the elaboration model for the multivariate analysis of observational quantitative data This model entails the systematic introduction of third variables to the analysis of a focal relationship between one independent and one dependent variable to ascertain whether an inference of causality is justified Two complementary strategies are used an exclusionary strategy that rules out alternative explanations such as spuriousness and redundancy with competing theories and an inclusive strategy that connects the focal relationship to a network of other relationships including the hypothesized causal mechanisms linking the focal independent

variable to the focal dependent variable The primary emphasis is on the translation of theory into a logical analytic strategy and the interpretation of results The elaboration model is applied with case studies drawn from newly published research that serve as prototypes for aligning theory and the data analytic plan used to test it these studies are drawn from a wide range of substantive topics in the social sciences such as emotion management in the workplace subjective age identification during the transition to adulthood and the relationship between religious and paranormal beliefs The second application of the elaboration model is in the form of original data analysis presented in two Analysis Journals that are integrated throughout the text and implement the full elaboration model Using real data not contrived examples the text provides a step by step guide through the process of integrating theory with data analysis in order to arrive at meaningful answers to research questions
